About the Trainer

AA

Dr Alfred Ang

Principal Trainer

Tertiary Infotech Academy Pte Ltd

ROLE

Principal Trainer, Tertiary Infotech Academy Pte. Ltd.

CERTIFICATION

ITIL 4 certified — IT service management, service operations and continual improvement.

DELIVERS

WSQ courses on IT service management, IT infrastructure and IT operations.

FOUNDER

Founder and lead instructor at Tertiary Infotech / Tertiary Courses.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

ICE-BREAKER

Let's Know Each Other

1

Your name and organisation / role.

2

Your experience with IT service management or IT support (if any).

3

What you want to be able to improve in your service operations after this course.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

HOUSEKEEPING

Ground Rules

Phones on silent

Set your mobile phone to silent mode.

Participate

No question is too small.

Mutual respect

Agree to disagree.

One at a time

One conversation at a time.

Be punctual

Return from breaks on time.

75% attendance

Required for funding.

WHAT YOU'LL ACHIEVE

Learning Outcomes

Key Concepts of Service Management

Services, value co-creation, outcomes, costs, risks, utility and warranty; provider and consumer roles.

ITIL Guiding Principles

The seven principles and how to apply them to real service management decisions.

Four Dimensions of Service Management

Organizations and people, information and technology, partners and suppliers, value streams and processes.

The Service Value System

The SVS, the six service value chain activities and the seven-step continual improvement model.

ITIL Practices

Incident, problem, change enablement, service request, service desk and service level management.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Skills Framework Alignment

TSC: Infrastructure Support (ICT-OUS-3007-1.1)

Knowledge (K1–K6)

K1: Diagnostic tools and processes to identify technical issues or disruptions in network infrastructure

K2: Infrastructure and network configuration techniques

K3: Troubleshooting techniques for infrastructure technical issues and problems

K4: Potential benefits and impact of infrastructure upgrades

K5: Sources of information and content for user guides and materials

K6: Types of system tests and their purpose

Abilities (A1–A8)

A1: Diagnose underlying technical problems or issues causing incidents and disruptions in infrastructure and network operations

A2: Implement problem management procedures to resolve root causes of infrastructure-related incidents

A3: Provide end-to-end management of technical issues and problems encountered by users within an agreed timeframe

A4: Perform infrastructure configuration and support activities at a higher level of difficulty or complexity

A5: Develop an action plan and timeline for infrastructure upgrade activities

A6: Propose ideas for infrastructure related upgrades and improvements based on current and future user needs

A7: Test infrastructure systems in advance to assess impact of potential upgrades or updates on performance level

A8: Organise information for the development of user guides and training materials for infrastructure administration activities

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

BEFORE YOU START

Briefing for Assessment

Phones away

Under the table or on the floor.

No recording

No photos of assessment scripts.

Work alone

No discussion during the assessment.

Black or blue pen

For hard-copy assessments.

No correction fluid

Cross out neatly instead.

Pens down on time

Scripts collected when time is up.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

FINAL ASSESSMENT

Assessment

Written Assessment (WA)

Short-Answer Questions — 1 hour, open book.

Case Study (CS)

Scenario-based analysis — 1 hour, open book.

Open book

Slides, Learner Guide and approved materials only.

Eligibility

75% attendance and assessed 'Competent'.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

ON ASSESSMENT DAY

Assessment Flow

1. **TRAQOM survey**
   QR on the LMS
2. **Attendance**
   scan the SSG QR
3. **Sit WA then CS**
   open book
4. **Submit**
   on the LMS
5. **Sign off**

TOPIC 01

Understand Key Concepts of Service Management

Services · Value · Outcomes, Costs and Risks · Providers and Consumers · Utility and Warranty

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

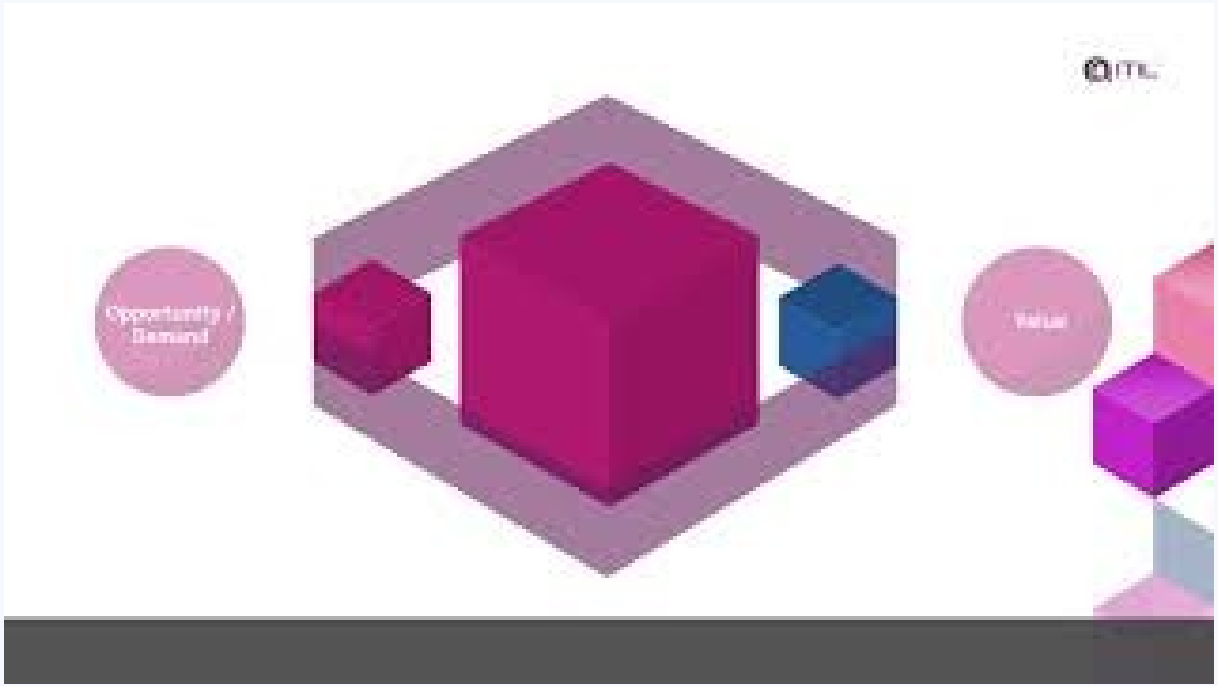

Topics

1. Service Management
2. Service and relationship with Value, Outcome, Cost and Risks
3. Service Consumers, Service Providers, Users, Customer
4. Understanding Nature and Components of Value
5. Value Co-Creation
6. Understanding Service Relationships

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Services and Service Management

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

What are Services?

The ITIL story: Axle's services

Su: *At Axle, our service is travel experience. We provide this service to our customers to create value both for them and for Axle. Service management helps us to realize this value.*

A service is a means of enabling value co-creation by facilitating outcomes that customers want to achieve, without the customer having to manage specific costs and risks.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

What Is a Service?

The ITIL story: Axle's customers

Here are three of Axle Car Hire's frequent customers, whom you will meet as the story unfolds:

Ichika Is a university student on holiday with no fixed plans. She hopes to visit music festivals as part of her travel experience. Apart from that, her travel is flexible. She is tech-savvy and quickly adapts to new applications and solutions. She is interested in trying new and exciting digital services.

Faruq Is recently retired and typically holidays alone. He is thoughtful and enjoys learning about and adopting new technology. Faruq often makes his travel plans on the go, as his needs can change, based on personal or health considerations.

Amelia Is the facilities manager at an organic food distribution company called Food for Fuel. Their head office is in central London, but many Food for Fuel consumers are in regional areas. This means access by public transport is typically infrequent, unreliable, and expensive. Consequently, Food for Fuel provides its sales staff with vehicles to enable them to conveniently and reliably visit existing and potential customers.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

What is IT Service Management?

Service management is a set of specialized organizational capabilities for enabling value to customers in the form of services.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service Value System

The purpose of the Service Value System (SVS) is to ensure that organization continually co-creates value with all stakeholders through the use and management of products and services.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

What is ITIL ?

- ITIL is a source of good practice in IT Service Management
- By good practice we mean guidance that is:
- validated across a diverse set of environments
- widely distributed.
- ITIL is not a standard
- ITIL is non-prescriptive

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

The ITIL Service Value System (SVS)

1. The SVS describes how all the components and activities of an organisation work together as a system to enable value creation.
2. Inputs: OPPORTUNITY (possibilities to add value) and DEMAND (the need for services from consumers).
3. Output: VALUE — the perceived benefits, usefulness and importance of something.
4. Five components: guiding principles, governance, the service value chain, practices, and continual improvement.
5. Its purpose is to prevent organisational silos — every part must work as one system, not as separate functions.

WHY IT MATTERS

A service desk that hits its own ticket targets while releases keep breaking production is optimising a silo, not the system.

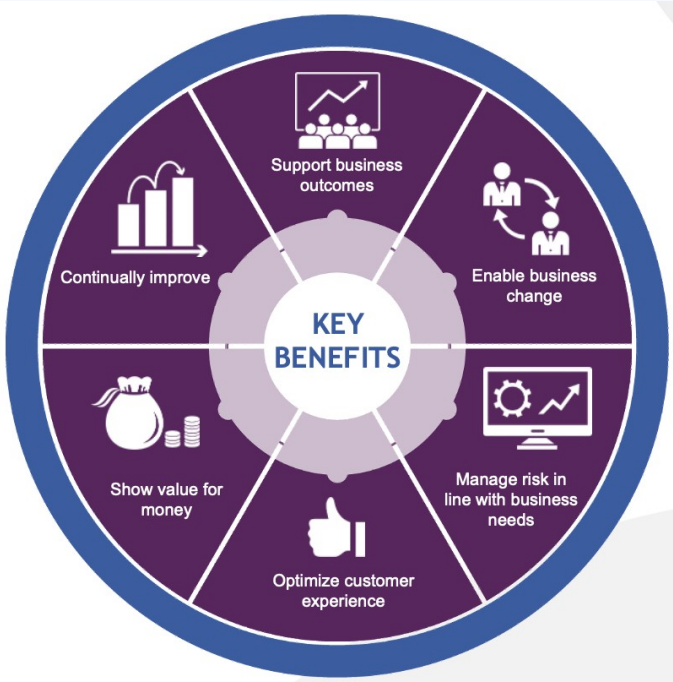

EXAM TIP

Know the five SVS components and that the two inputs are opportunity and demand.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Why ITIL ?

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Why ITIL ?

The ITIL story: The CIO's vision for Axle

Henri: *These days, the pace of industry change is rapid, with the term 'Fourth Industrial Revolution' now widely used. Companies such as Axle are competing with disruptors that include driverless cars and car share.*

Service expectations have changed since Axle was created 10 years ago. Customers want immediate access to services via apps and online services. Axle's booking app is out of date, and our technology isn't keeping pace with changes in our service offerings.

My vision for Axle is that we become the most recognized car-hire brand in the world. We'll continue to offer outstanding customer service while maintaining competitive car-hire rates. After all, Axle is now about more than just hiring a vehicle. We must focus on our customers' whole travel experience.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

ITIL Versions Overview

1 ITIL Version 1 – 1986

2 Function-based practice of 40+ books dealing with a variety of IT practices developed by Central Computer and Telecommunications Agency (CCTA) in the United Kingdom.

3 ITIL Version 2 – 1999

4 Process-based practice of 10 books and the globally accepted best practice framework for IT Service Management. The most popular books were “Service Support” and “Service Delivery”.

5 ITIL Version 3 – 2007

6 Service lifecycle-based practice incorporating five lifecycle titles forming the core of ITIL practice.

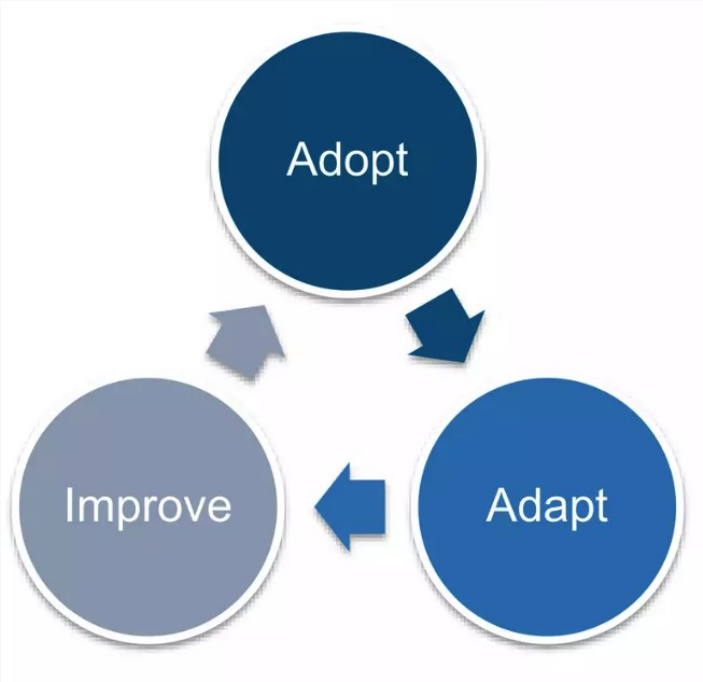

7 ITIL 2011 – 2011

8 Updated for consistency and clarity.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

How to Use ITIL

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

ITIL Service Value System

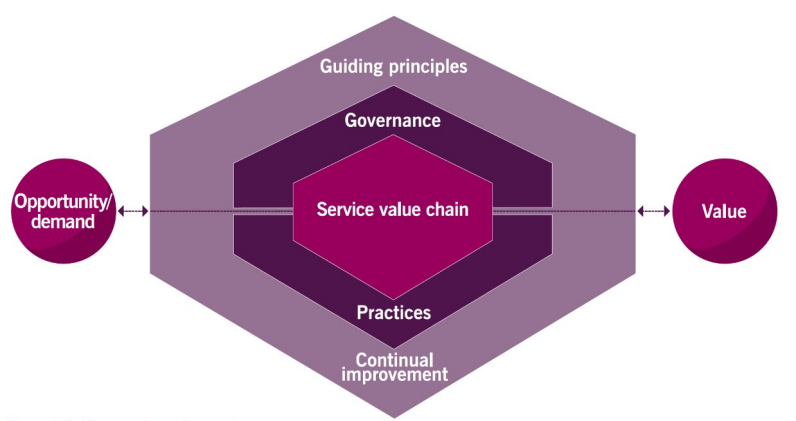

Figure 1.1 The service value system

- Guiding principles
- Governance
- Service value chain
- Practices
- Continual improvement.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Opportunity and Demand — the Inputs to the SVS

1. OPPORTUNITY represents options or possibilities to add value for stakeholders, or otherwise improve the organisation.
2. DEMAND is the need or desire for products and services from internal and external consumers.
3. Both trigger activities within the SVS; those activities lead to the creation of value.
4. Opportunity and demand are always entering the system — the organisation chooses which to accept.
5. Not all demand should be met, and not every opportunity should be pursued: both are filtered against strategy and capacity.

IN PRACTICE

Rising remote working (demand) plus a new cloud licensing model (opportunity) together justify a VDI service.

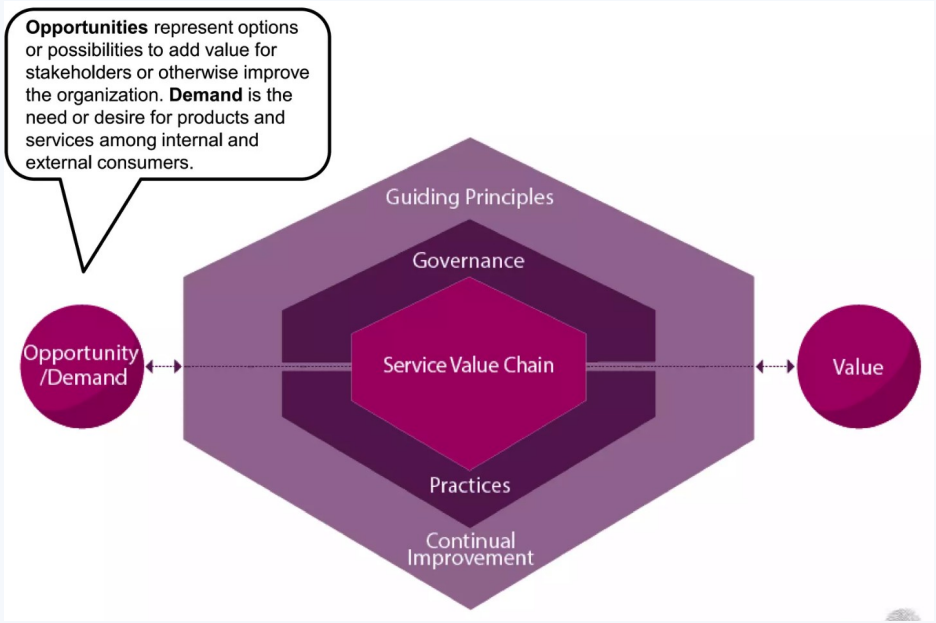

EXAM TIP

Exam wording: the INPUTS to the SVS are 'opportunity and demand'. Value is the OUTPUT.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Opportunity and Demand

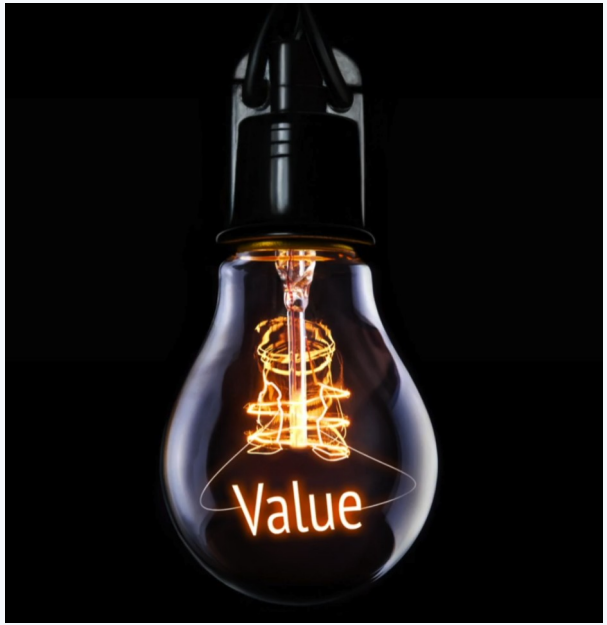

Opportunities represent options or possibilities to add value for stakeholders or otherwise improve the organization.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Value

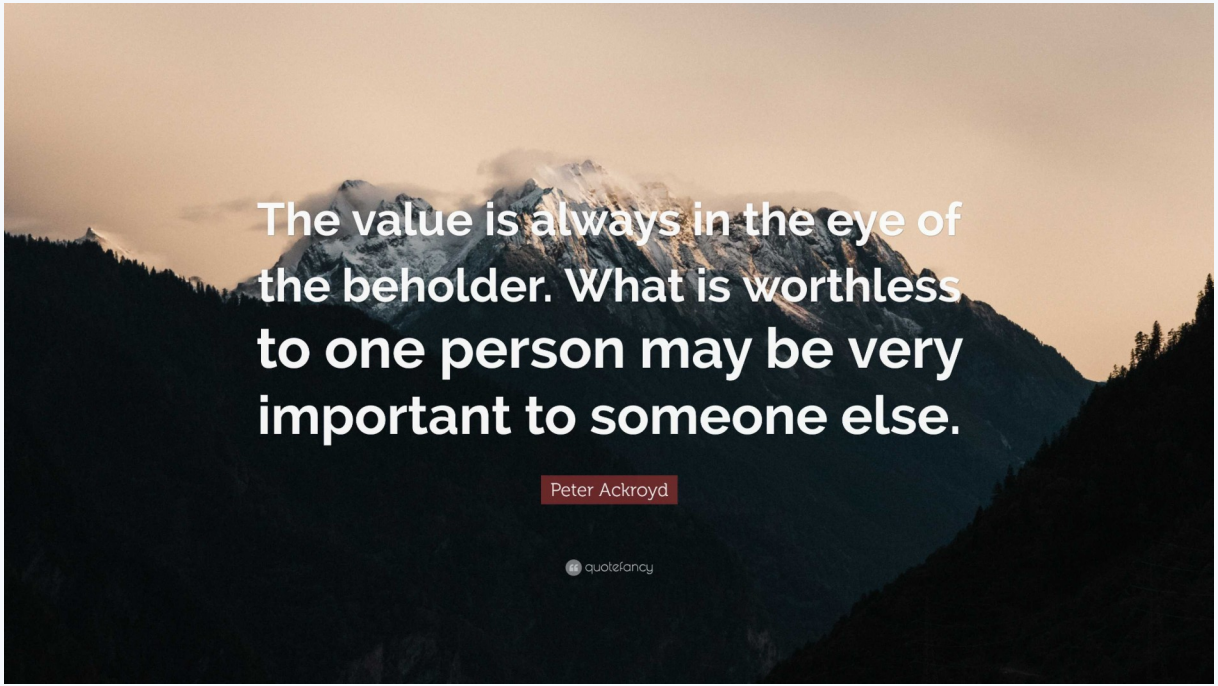

Value is the perceived benefits, usefulness, and importance of something

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

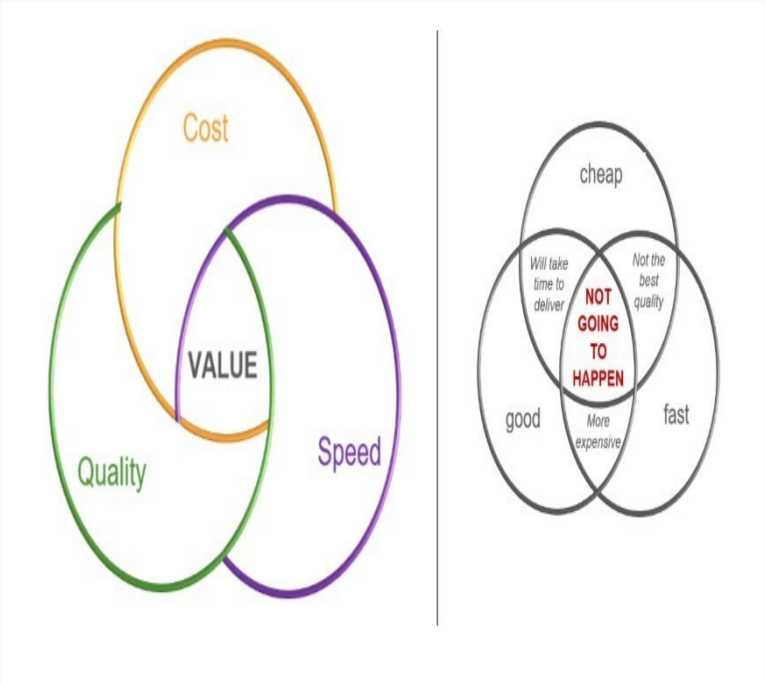

The Nature of Value

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Three Dimensions of Value

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Three Dimensions of Value

The ITIL story: Value

Marco: *We're planning to release a generous new offering, giving an extra day of car hire with every booking.*

Henri: *However, we must remember that value means different things for different people. Axle has a broad range of customers, and each of them has their own requirements for car hire. We need to make sure that any changes to our services are actually providing some type of value to our customers.*

Ichika: *To me, 'value' means freedom of movement. I want my travel to be easy, hassle-free, and flexible. I opt in to mailing lists and subscriptions when it suits me. I take frequent short trips and rarely visit the same location twice. An extra day of car hire won't always suit my plans.*

Faruq: *I don't travel often, so I don't have my own car. The value of a car-hire service for me is the on-demand availability of a car that suits my needs. I spend less money on car hire each year than it would cost me to maintain and run my own car.*

Value means it meets my budget. Being retired means I'm flexible, with very few commitments or deadlines. When I'm on holiday, I only plan a few days ahead. An extra day of car hire offers real value to me.

Amelia: *The value of car hire for my organization, Food for Fuel, is two-fold. First, we need the ability to reach our customers. Second, we're keen to lower our costs and risks by hiring cars instead of running our own fleet.*

As a regular customer who books car hire on behalf of my sales reps and staff, I value a consistent and reliable standard of service. Travel and car hire at Food for Fuel is pre-planned and typically only requires daily hire. There's not much value in an extra day of car hire for my organization.

Henri: *We also have to think about how value is created for Axle. The most obvious value we receive when we hire out our cars is revenue. For our service consumers, value includes easy access to a vehicle when they need it, without the overall expense of car ownership. In both cases, we need a combination of the two for the value to be realized. In that way, we co-create value through our service relationships.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

What is an Organization?

- An organization is a person or a group of people that has its functions with responsibilities, authorities, and relationships to achieve its objectives
- Organizations vary in size, complexity, and legal relationships
- Organizations: entities with functions, responsibilities, authorities, and relationships to achieve objectives
- Organizational interdependence and role variability

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service Providers

The ITIL story: Service providers

Henri: *Axle Car Hire acts as a service provider. We provide cars for hire. At the same time, other organizations, such as mechanics and the companies that we buy our cars from, act as service providers for Axle.*

When provisioning services, an organization takes on the role of the service provider. The provider can be external to the consumer's organization, or they can both be part of the same organization.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service Provisioning

1. Management of the provider’s resources, configured to deliver the service
2. Access to these resources for users
3. Fulfilment of the agreed-upon service actions
4. Service level management and continual improvement
5. The supplying of goods

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service Consumers

The ITIL story: Axle's service consumers

Su: *Our most obvious service consumers are the people and organizations who hire our cars, visit our offices, and use our website and booking app. For example, Ichika and Faruq are service consumers, and so is Food for Fuel. They are also our customers.*

Radhika: *Users are the people who make use of our services. Our car-hire users are the drivers and passengers in our vehicles.*

Marco: *Sponsors are the people who authorize budgets. For Axle Car Hire, our sponsors include Amelia from Food for Fuel, who approves the travel budget even if she doesn't travel herself.*

Henri: *Individual service consumers such as Ichika and Faruq approve their own budgets, define their requirements for car hire, and drive the cars. Therefore, Ichika and Faruq act as sponsors, customers, and users. Sometimes, though, they may share the trip with fellow drivers (friends or family members). In this case, their contracts will include other users.*

When receiving services, an organization takes on the role of the service consumer.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service Consumption

- Management of the consumer's resources needed to use the service
- Service actions performed by users, including utilitizing the provider's resources, and requesting service actions to be fulfilled
- The receipt or acquisition of goods

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Consumers Roles

- Customer A person who defines the requirements for a service and takes responsibility for the outcomes of service consumption.
- User A person who uses services.
- Sponsor A person who authorizes budget for service consumption.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service Offerings

1. A service offering is a formal description of one or more services, designed to address the needs of a target consumer group.
2. It may include GOODS, ACCESS TO RESOURCES, and SERVICE ACTIONS.
3. GOODS — ownership is TRANSFERRED to the consumer, who takes responsibility for future use.
4. ACCESS TO RESOURCES — ownership is NOT transferred; access is granted or licensed under agreed terms and conditions.
5. SERVICE ACTIONS — performed by the service provider to address a consumer need, according to an agreement.

MOBILE PHONE PLAN

Goods: the handset you keep. Access to resources: the network and data allowance. Service actions: activation and support calls.

EXAM TIP

The test is ownership: transferred = goods; granted for a period = access to resources; performed by the provider = service action.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service vs Products

● Services: A means of enabling value co-creation by facilitating outcomes that customers want to achieve, without the customer having to manage specific costs and risks.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

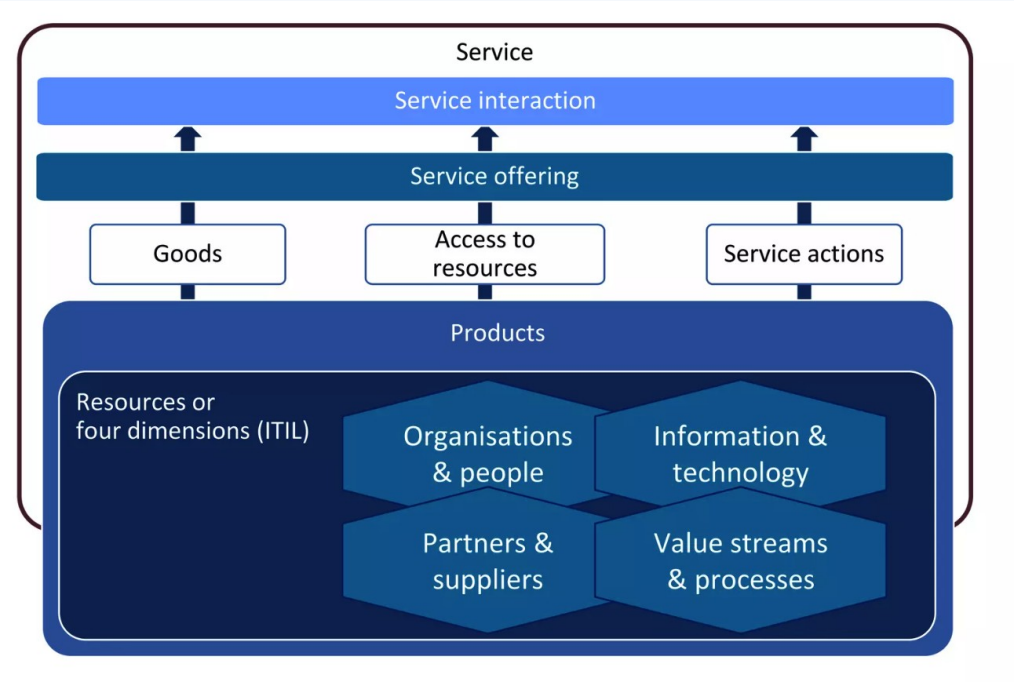

Service Offering

1. Goods
2. Supplied to consumer;
3. Ownership is transferred to consumer;
4. Consumer takes responsibility for future use
5. Access to Resources
6. Ownership is not transferred to the consumer;
7. Access is granted or licensed to the consumer under agreed terms and conditions
8. The consumer can only access the resources during the agreed consumption period and according to the agreed services and terms

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service Offering

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service Offerings

The ITIL story: Axle's service offerings

Su: *Axle's service offerings include car hire and the various options we provide to address different travel needs. These offerings include discounted insurance, a loyalty programme, and complimentary travel products which include bottled water, tissues, badge holders for parking permits, and baby seats.*

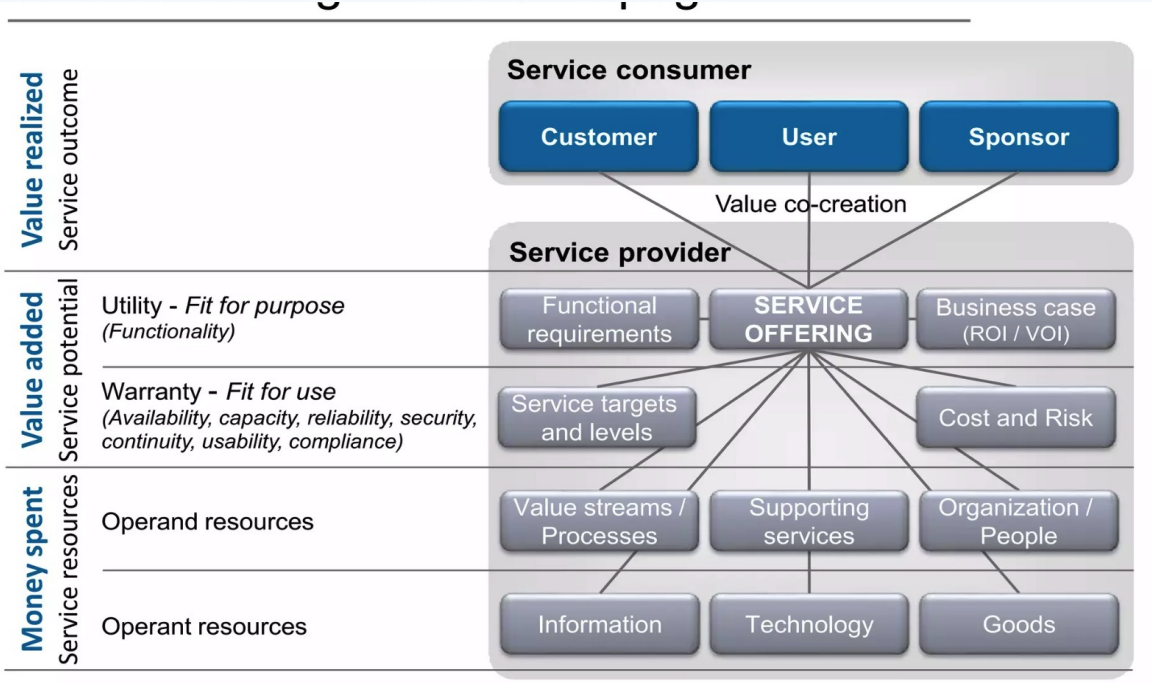

Our consumers are a diverse group and expect different travel experiences. For example, our corporate consumers don't usually need baby seats or weekend rates. At the same time, some individual customers aren't interested in free airport car collection if they're only travelling locally.

All our service offerings include access to our website and booking app.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

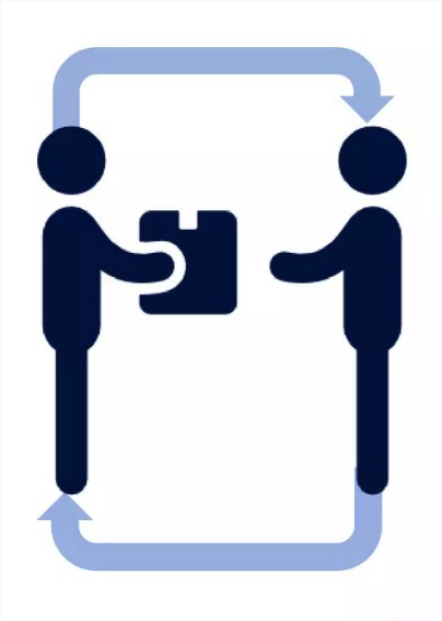

Service Offering

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service Relationship

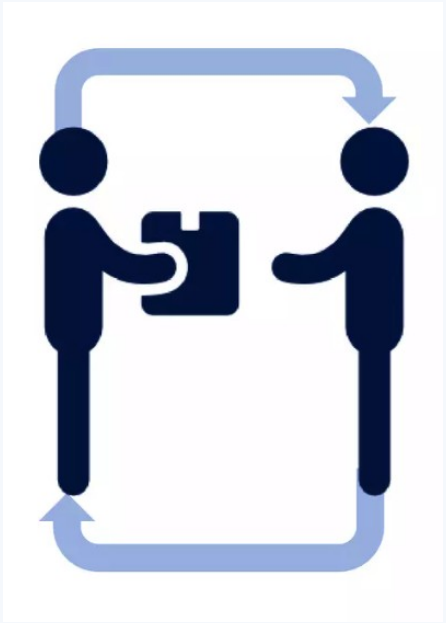

A service relationship is cooperation between a service provider and service consumer.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service Relationship

Service relationships are established between two or more organizations to co-create value. In a service relationship, organizations will take on the roles of service providers or service consumers.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service Relationship Model

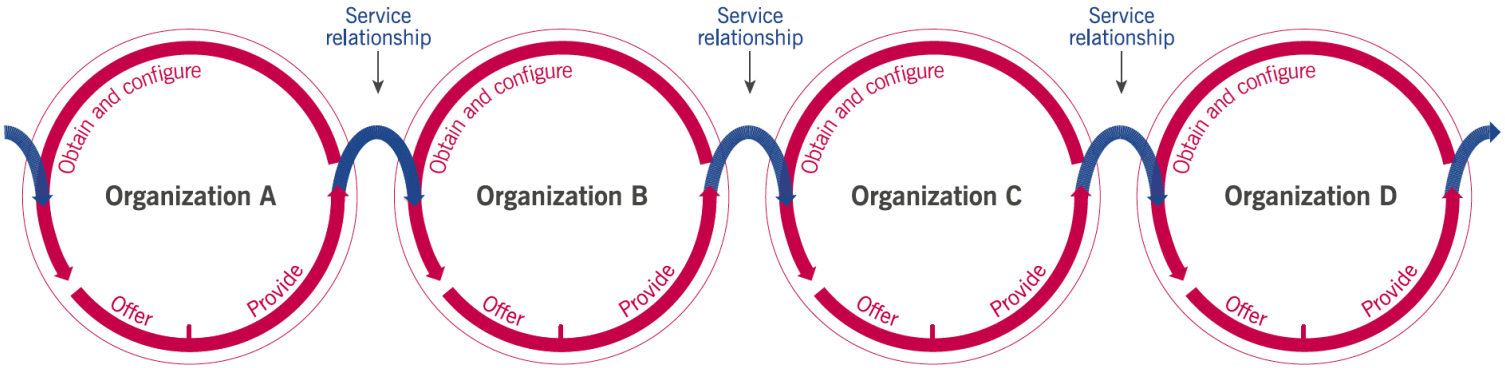

Figure 2.1 The service relationship model

When services are delivered by the provider, they create new resources for service consumers or modify their existing ones.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Resources, Cost and Risk

1. A RESOURCE is personnel, material, finance or any other entity required to execute an activity or achieve an objective.
2. Resources used by an organisation may be owned by it, or used under agreement with their owner.
3. Service relationships shift the burden of certain resources from the consumer to the provider.
4. This is precisely how a service removes cost and risk from the consumer — the provider carries them instead.
5. The consumer still manages the resources it needs in order to CONSUME the service.

CLOUD HOSTING

The provider owns the data centre, hardware and patching; the consumer keeps only the skills to use the platform.

EXAM TIP

Resources are the 'what you need to do the work'. Do not confuse them with the service actions performed with them.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Service Relationship Model

The ITIL story: Axle's service relationships

Henri: *Axle has service relationships with many service providers and consumers, both internal and external. Some services provided to Axle create new resources for the business, such as car manufacturers selling cars to us. Other services, such as the work done for us by our internal car cleaning team, and mechanics outside of Axle, change our existing resources by ensuring that our cars are clean and functional.*

Axle can use these resources in other relationships to provide its own services, in the form of car hire, to consumers, i.e. our customers.

These are just a few examples of the service relationships that Axle has. The organization as a whole has many more.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Service Value - Outcomes, Costs and Risks

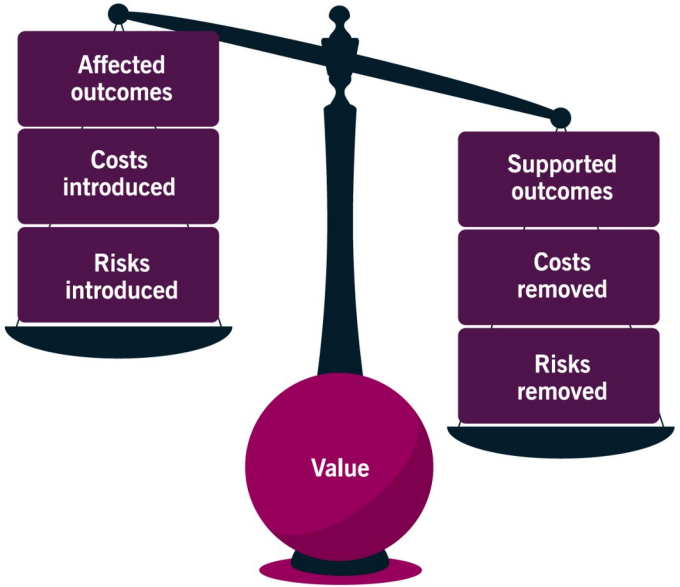

Figure 2.2 Achieving value: outcomes, costs, and risks

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Output vs Outcome

Output

- Output:
- A tangible or intangible deliverable of an activity.
- Example: delivery of a package or completed task
- Outcome:
- A result for a stakeholder enabled by one or more outputs.
- Example: ability to print a report due to delivered equipment
- Key distinction:

Outcome

- Outputs are deliverables from activities
- Outcomes are benefits or results gained from outputs

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Output vs Outcome

The ITIL story: Outputs and outcomes

Henri: *At Axle, our key output is a car that is clean, roadworthy, and well maintained.*

Su: *For our service consumers, outcomes include travel that is convenient and affordable, and meets a range of needs. This includes self-drive holidays, client site visits, and travel to see family and friends.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Costs in a Service Relationship

1. COST is the amount of money spent on a specific activity or resource; it can also be expressed non-monetarily, as time or effort.
2. Every service both IMPOSES costs on the consumer and REMOVES costs from the consumer.
3. Costs IMPOSED: the fees, charges and effort of adopting and using the service.
4. Costs REMOVED: the infrastructure, staff, training and maintenance the consumer no longer has to fund.
5. A service is worth adopting when the costs removed plus the outcomes enabled exceed the costs imposed.

PAYROLL SAAS

Imposes a subscription and migration effort; removes a payroll server, an in-house specialist and quarterly compliance updates.

EXAM TIP

Expect a question that asks which costs a service REMOVES — the answer is the consumer's own infrastructure and effort.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Types of Cost — Imposed and Removed

1. Costs IMPOSED on the consumer: the fees, charges and expenses of adopting and using the service.
2. Also imposed: migration effort, training time, and the cost of integrating the service with existing systems.
3. Costs REMOVED from the consumer: the infrastructure, licences, premises and staff no longer needed.
4. Also removed: the effort of maintenance, patching, capacity planning and specialist recruitment.
5. Adoption is justified when the costs removed, plus the outcomes enabled, outweigh the costs imposed.

BOTH DIRECTIONS AT ONCE

Moving email to a cloud suite imposes per-seat fees; it removes mail servers, backups and an administrator.

EXAM TIP

Every service does BOTH. A question naming only one direction is testing whether you know the other exists.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Risks

A possible event that could cause harm or loss, or make it more difficult to achieve objectives.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Risks in a Service Relationship

1. A RISK is a possible event that could cause harm or loss, or make it more difficult to achieve objectives.
2. Risk can also be defined as uncertainty of outcome, and can be used to measure both positive and negative uncertainty.
3. Like cost, a service both IMPOSES and REMOVES risk for the consumer.
4. Risks IMPOSED: service outages, security exposure, supplier lock-in, compliance gaps.
5. Risks REMOVED: the consumer no longer carries hardware failure, capacity planning or specialist staff turnover.

MANAGED SECURITY

Removes the risk of missing a critical patch; imposes the risk of depending on the provider's own response times.

EXAM TIP

A service NEVER removes all risk. Foundation questions test that both directions exist.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Utility and Warranty

1. UTILITY is the functionality offered by a product or service to meet a particular need — 'what the service DOES'.
2. Utility determines whether a service is FIT FOR PURPOSE.
3. To have utility, a service must either support the performance of the consumer, or remove constraints from the consumer — many do both.
4. WARRANTY is the assurance that a product or service will meet agreed requirements — 'how the service PERFORMS'.
5. Warranty determines whether a service is FIT FOR USE, and covers availability, capacity, security and continuity.
6. A service needs BOTH to create value: functionality nobody can reach delivers nothing.

HOTEL ROOM

Utility: a bed, wifi and a desk. Warranty: the room is available on the night booked, and the door lock works.

EXAM TIP

Utility = fit for PURPOSE = what it does. Warranty = fit for USE = how it performs. Both are needed.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Utility vs Warranty

Utility

- Utility

Warranty

- What the service does - fit for purpose
- Functionality offered to meet a need
- Examples:
- Access to:
- Bed
- Internet connection
- Food
- Warranty

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Utility vs Warranty

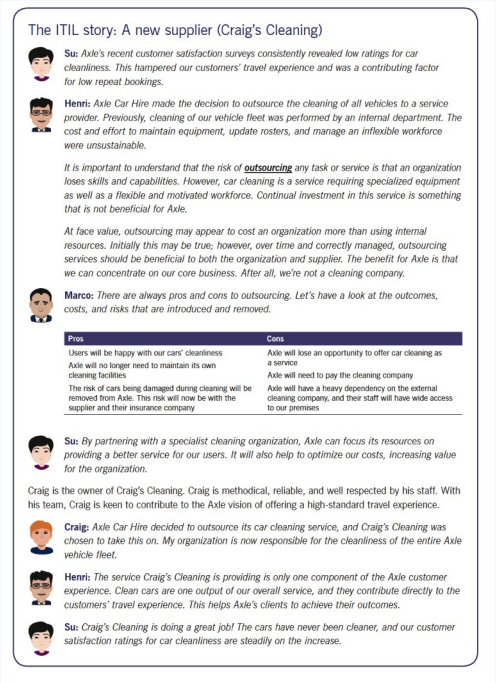

Utility focuses on the functionality and ensuring that the service meets the needs and purposes of the consumer.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

From Utility and Warranty to the Service Value Chain

The ITIL story: A new supplier (Craig's Cleaning)

Su: *Axle's recent customer satisfaction surveys consistently revealed low ratings for car cleanliness. This hampered our customers' travel experience and was a contributing factor for low repeat bookings.*

Henri: *Axle Car Hire made the decision to outsource the cleaning of all vehicles to a service provider. Previously, cleaning of our vehicle fleet was performed by an internal department. The cost and effort to maintain equipment, update rosters, and manage an inflexible workforce were unsustainable.*

*It is important to understand that the risk of **outsourcing** any task or service is that an organization loses skills and capabilities. However, car cleaning is a service requiring specialized equipment as well as a flexible and motivated workforce. Continual investment in this service is something that is not beneficial for Axle.*

At face value, outsourcing may appear to cost an organization more than using internal resources. Initially this may be true; however, over time and correctly managed, outsourcing services should be beneficial to both the organization and supplier. The benefit for Axle is that we can concentrate on our core business. After all, we're not a cleaning company.

Marco: *There are always pros and cons to outsourcing. Let's have a look at the outcomes, costs, and risks that are introduced and removed.*

Pros	Cons
Users will be happy with our cars' cleanliness	Axle will lose an opportunity to offer car cleaning as a service
Axle will no longer need to maintain its own cleaning facilities	Axle will need to pay the cleaning company
The risk of cars being damaged during cleaning will be removed from Axle. This risk will now be with the supplier and their insurance company	Axle will have a heavy dependency on the external cleaning company, and their staff will have wide access to our premises

Su: *By partnering with a specialist cleaning organization, Axle can focus its resources on providing a better service for our users. It will also help to optimize our costs, increasing value for the organization.*

Craig is the owner of Craig's Cleaning. Craig is methodical, reliable, and well respected by his staff. With his team, Craig is keen to contribute to the Axle vision of offering a high-standard travel experience.

Craig: *Axle Car Hire decided to outsource its car cleaning service, and Craig's Cleaning was chosen to take this on. My organization is now responsible for the cleanliness of the entire Axle vehicle fleet.*

Henri: *The service Craig's Cleaning is providing is only one component of the Axle customer experience. Clean cars are one output of our overall service, and they contribute directly to the customers' travel experience. This helps Axle's clients to achieve their outcomes.*

Su: *Craig's Cleaning is doing a great job! The cars have never been cleaner, and our customer satisfaction ratings for car cleanliness are steadily on the increase.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

The Service Value Chain

1. The service value chain is an operating model: a set of six interconnected activities an organisation performs to deliver a valuable product or service.
2. The six activities are PLAN, IMPROVE, ENGAGE, DESIGN AND TRANSITION, OBTAIN/BUILD, and DELIVER AND SUPPORT.
3. Each activity converts inputs into outputs; the outputs of one commonly become the inputs of another.
4. The activities can be combined in many sequences — these combinations are called VALUE STREAMS.
5. The chain is flexible by design: no fixed order is prescribed, so it adapts to any type of demand.

ONE VALUE STREAM

An incident enters at 'engage', is resolved by 'deliver and support', and a fix is fed to 'improve'.

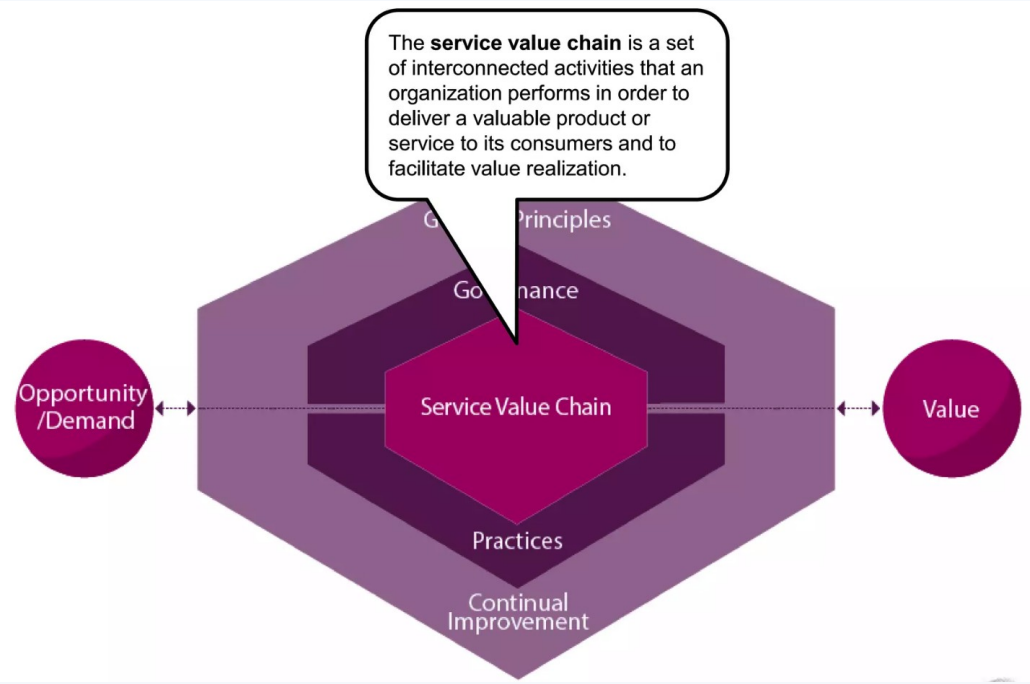

EXAM TIP

Learn all six activity names and the PURPOSE sentence of each — they are examined directly.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Service Value Chain

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

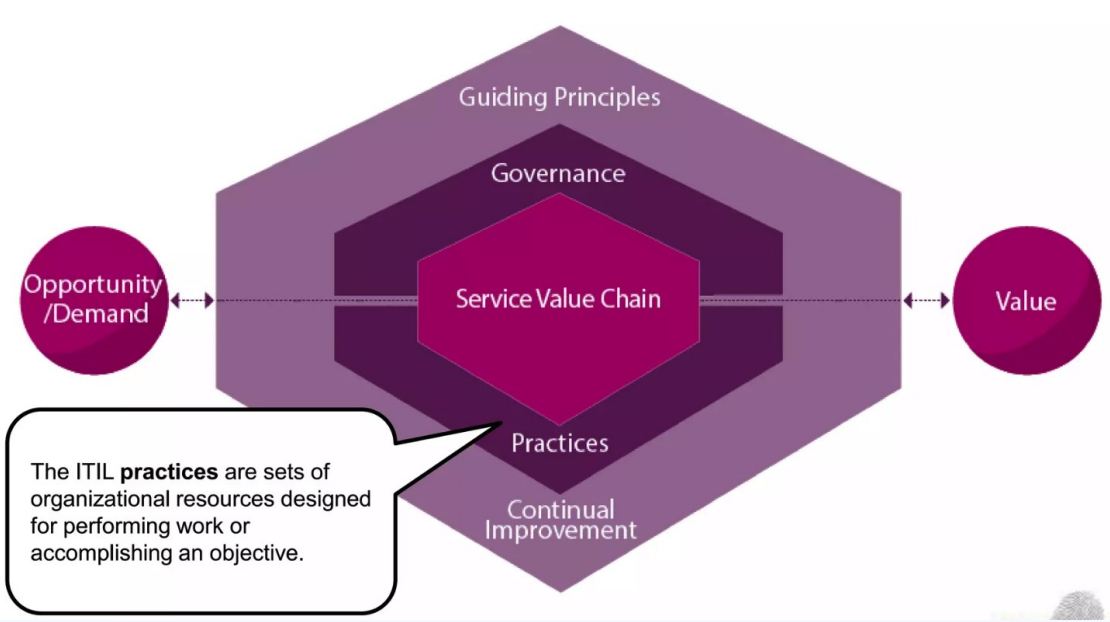

Service Value Chain Activities

1. Plan
2. Improve
3. Engage
4. Design and transition
5. Obtain/build
6. Deliver and support.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Practices

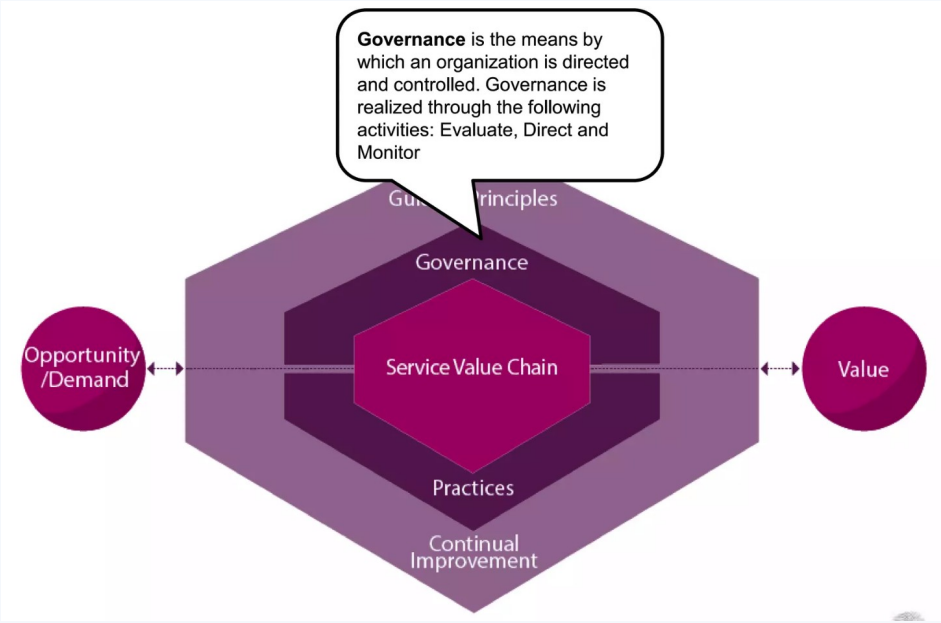

The 34 practices are set of organization resources designed for performing work or accomplishing an objective.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Governance

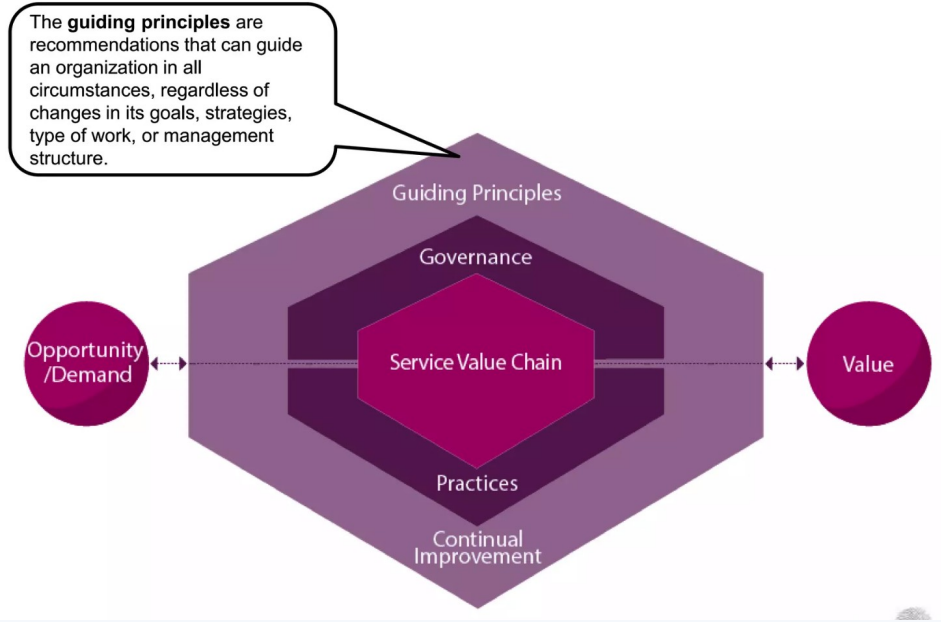

Governance is the means by which an organization is directed and controlled.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Guiding Principles

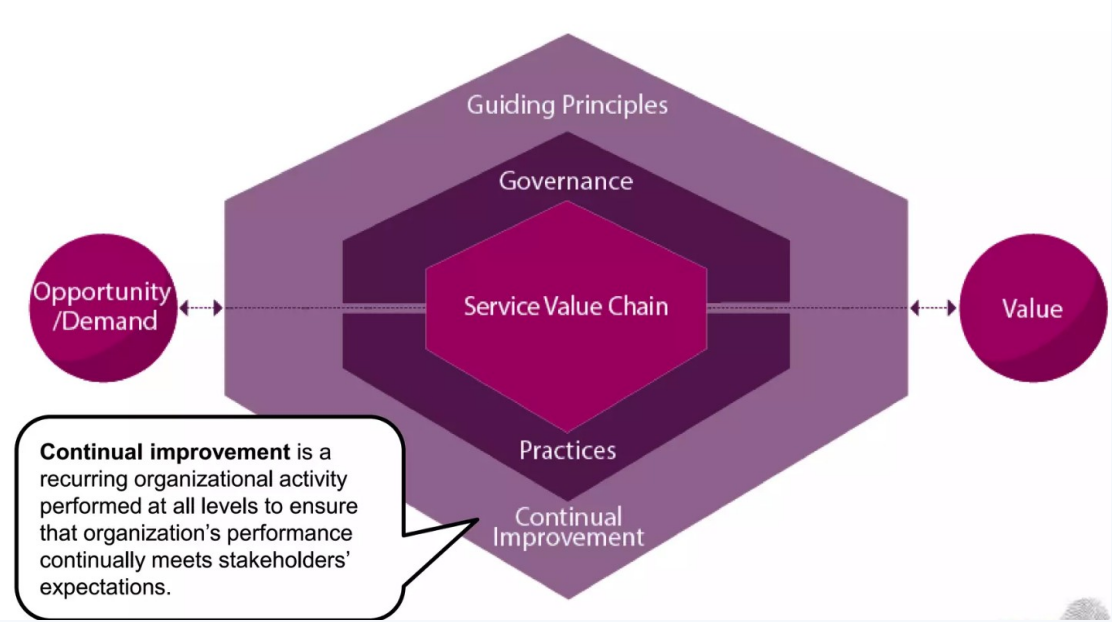

Guiding principles are recommendations that can guide an organization in all circumstances, regardless of changes in its goals, strategies, type of work, or management.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Continual Improvement

Continual improvement is a recurring organizational activity performed at all levels to ensure that an organization's performance continually meets stakeholders' expectations.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

Four Dimensions of ITSM

To ensure a holistic approach to service management, ITIL 4 outlines four dimensions of service management, from which each component of the SVS should be considered.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Four Dimensions of ITSM

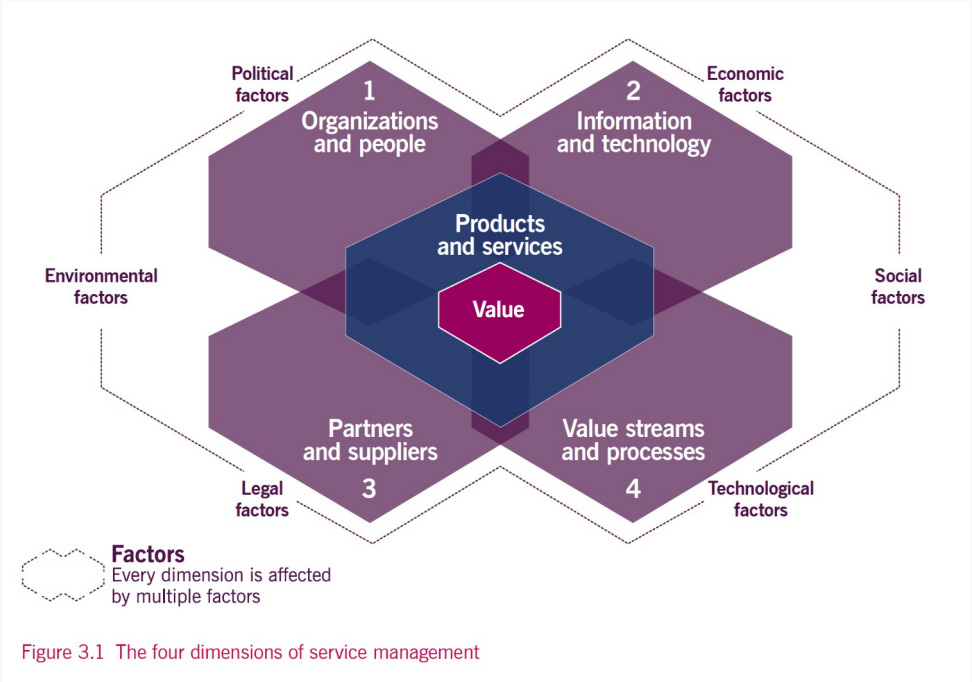

Figure 3.1 The four dimensions of service management

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

External Factors

Service providers do not operate in isolation. They are affected by many external factors, and work in dynamic and complex environments that can exhibit high degrees of volatility and uncertainty that impose constraints on how the service provider can work.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 01

PESTLE

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 1

Knowledge Check

Within ITIL 4, how many components make up the Service Value System?

a 4

b 5

c 6

d 7

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 2

Knowledge Check

What are the inputs to Service Value System?

a Demand or value

b Value or cost

c Opportunities or risk

d Demand or opportunities

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 3

Knowledge Check

Service value chain is define as:

a. A set of interconnected tasks that are performed to deliver value

b. A set of interconnected activities that are performed to deliver good to consumers

c. A set of interconnected procedure that are performed to deliver service

d. A set of interconnected activities that are performed to deliver a product or service to consumers

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 4

Knowledge Check

Which component within ITIL SVS is supposed to make recommendations to guide an organization in all circumstances?

a. Organization and people

b. 34 practices

c. Continual improvement

d. Guiding principles

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 5

Knowledge Check

ITIL ensures a holistic approach to ITSM through the consideration of?

a. Service Value System

b. Governance

c. Four dimensions of service management

d. 34 practices

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 6

Knowledge Check

How many roles are there for consumers?

a 1

b 2

c 3

d 4

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 7

Knowledge Check

The definition of cost from ITIL perspective

a. Money gain from using the service

b. Business lost from the using the service

c. Money spent on resources or specific activity

d. Money saved from using the service

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 8

Knowledge Check

Utility is defined as:

a. Assurance that a service will meet agreed-upon requirements

b. Functionality of the service to meet a particular need

c. How it performs and whether it is fit for use

d. How it facilitates its desired outcome and create value

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 9

Knowledge Check

What is a description of one or more services, designed to address the needs of a target consumer group?

a Products

b Resources

c Goods

d Service offering

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 10

Knowledge Check

When services are delivered by the provider, they create new _____ for service consumers or modify their existing ones.

a Value

b Risk

c Cost

d Resources

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 11

Knowledge Check

What is the definition of warranty?

a. A tangible or intangible deliverable that is produced by carrying out an activity

b. The assurance that a product or service will meet agreed requirements

c. A possible event that could cause harm or loss or make it more difficult to achieve objectives

d. The functionality offered by a product or service to meet a particular need

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

IN-CLASS ACTIVITY

Case Study

1. Tech Solutions Inc. is a global IT services company established in 2005, employing over 15,000 professionals across North America, Europe, and Asia. It has been ranked among the top 10 IT service providers by Global IT Services Magazine. The company offers a wide range of services, including IT consulting, software development, cloud solutions, cybersecurity, and managed IT services.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

IN-CLASS ACTIVITY

Case Study

1. With the increasing adoption of cloud computing and remote work solutions, Tech Solutions Inc. sees an opportunity to expand its cloud services offerings. The company plans to introduce a new range of cloud solutions designed to help businesses transition smoothly to the cloud, enhance cybersecurity, and manage their IT infrastructure more efficiently.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

IN-CLASS ACTIVITY

Case Study

1. Cloud Solutions Packages:

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

IN-CLASS ACTIVITY

Case Study

1. All packages guarantee a smooth transition within 10 business days. If customers do not receive any updates within this period, they can contact the 24/7 support hotline or use the online customer portal with chatbot assistance.

2. As the company expands its services, there is a need for better insight into customer satisfaction and service performance. The IT Director has been tasked with evaluating a service management solution to address this need.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

IN-CLASS ACTIVITY

Case Study

1. Divide the class into 2-4 small groups, each with 2-3 persons.
2. Scenario Analysis from ITIL Context
3. Questions:
4. 1: List examples of opportunity and value
5. 2: Consider external factors leveraged by the company
6. 3: What are the goods, access to resources, and service actions
7. 4: What are the consideration factors for service management solution

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

IN-CLASS ACTIVITY

Case Study

1. Presentation:
2. Groups will discuss their findings and present them to the rest of the class.
3. Each group should clearly justify their answers, mentioning any assumptions made during the analysis.
4. Assumptions:
5. Assumptions may include specific market conditions, customer behaviors, or technological capabilities available to the company.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

02

TOPIC 02

ITIL Guiding Principles

Focus on Value · Start Where You Are · Progress Iteratively · Collaborate · Think Holistically · Keep It Simple · Optimize and Automate

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Topics

1. Focus on Value
2. Start Where You Are
3. Progress Iteratively with Feedback
4. Collaborate and Promote Visibility
5. Think and Work Holistically
6. Keep It Simple and Practical
7. Optimize and Automate

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

What Is a Guiding Principle?

1. A guiding principle is a recommendation that guides an organisation in ALL circumstances, regardless of changes in its goals, strategies, type of work or management structure.
2. The principles are universal and enduring — they do not change when the organisation's situation changes.
3. They embody the core messages of ITIL and of service management generally.
4. They support successful action and good decisions at every level, from strategy to a single ticket.
5. There are SEVEN principles, and an organisation need not adopt them one at a time — they reinforce each other.

HOW THEY ARE USED

Faced with any decision, ask which principles apply and what each would have you do — and stop doing.

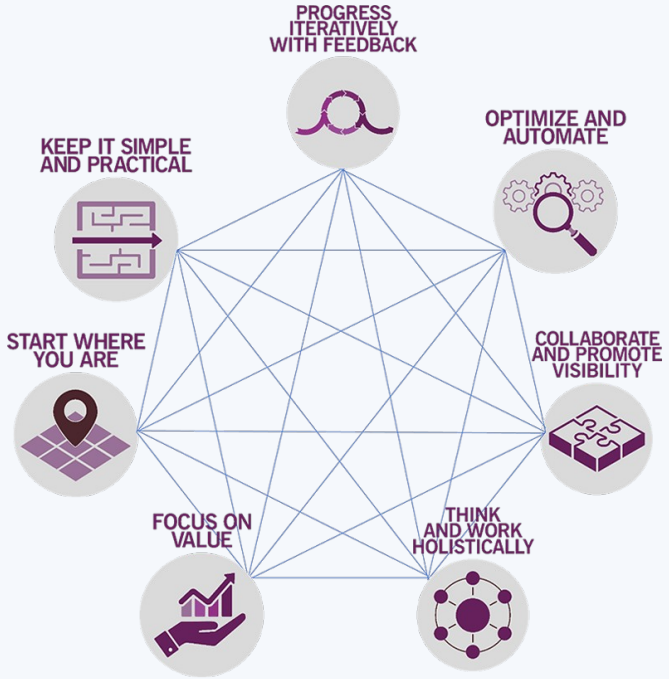

EXAM TIP

Universality is the defining trait: 'in all circumstances, regardless of changes'.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

7 ITIL Guiding Principles

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

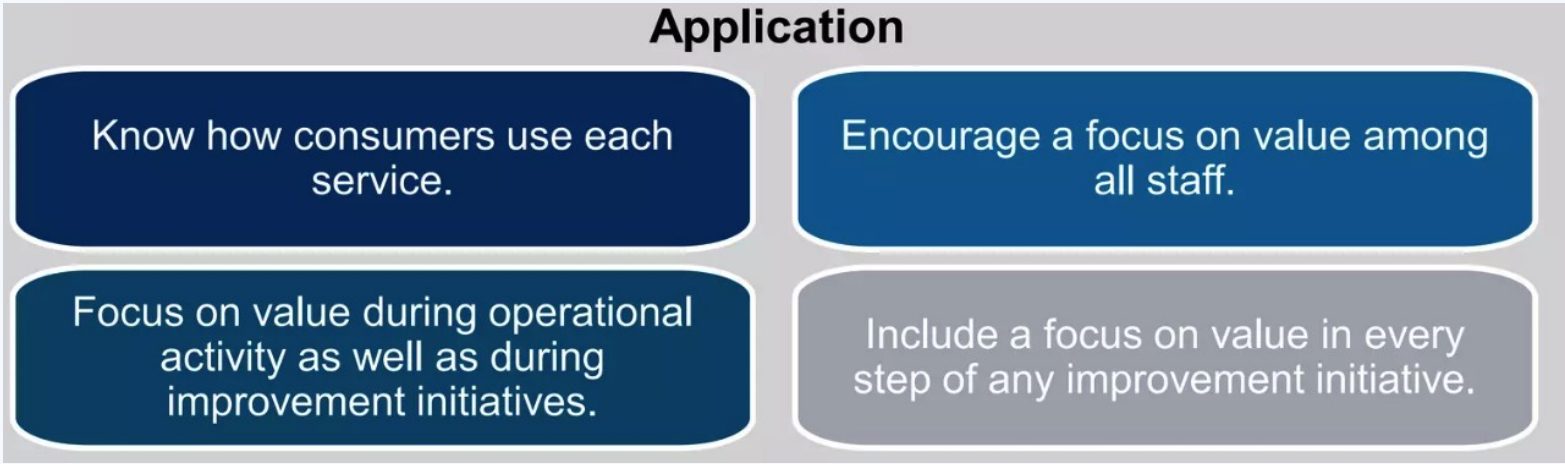

7 ITIL Guiding Principles

1. Focus on value
2. Start where you are
3. Progress iteratively with feedback
4. Collaborate and promote visibility
5. Think and work holistically
6. Keep it simple and practical
7. Optimize and automate.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Focus on Value Principle

Everything the organization does should link back, directly or indirectly, to value for itself, its customers, and other stakeholders.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Focus on Value

1. Everything the organisation does should link back, directly or indirectly, to value for itself, its customers and its other stakeholders.
2. Start by knowing WHO is being served — the consumer, and any other stakeholder affected.
3. Then establish WHAT is being delivered or improved for them, and what they actually consider valuable.
4. Value is defined by the CONSUMER, not by the provider's opinion of its own service.
5. Value takes many forms: revenue, customer loyalty, reduced cost, reduced risk, better experience.

APPLYING IT

Before adding a feature, ask which consumer outcome it improves. If nobody can answer, it is not value.

EXAM TIP

'Know who is being served' and 'understand what the consumer values' are the signature phrases.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Focus on Value

1. Know who is being served
2. What is being delivered or improved for the service consumer and/or stakeholders
3. What is truly of value to the service consumer
4. Why the consumer use the service
5. What services help them
6. How the services help them achieve goals
7. Role of cost/financial consequences for service consumer
8. Risks involved for the service

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Focus on Value

The ITIL story: Focus on value

Radhika: *When Axle expanded to the Asia-Pacific region, we undertook research focused on customers travelling outside their native countries. The results found that American and European customers travelling to these areas had concerns around unfamiliar road rules and safety.*

Marco: *Axle is introducing a certified, third-party driver assistance system called Axle Aware. The system checks external surroundings and internal conditions in the car. It includes cameras to monitor the area around the car, and an artificial intelligence program with local road rules. It can even let the driver know when fatigue is starting to set in.*

The system will alert the driver to approaching dangers and potential road rule breaches. For example, in Australia, local road rules dictate that drivers are required to give a minimum of 1 metre when passing cyclists at a speed of 60 km/h or less, or 1.5 metres when the speed is more than 60 km/h.

Su: *Many visiting tourists will be mostly focused on driving on the correct side of the road and won't know about this rule, but the Axle Aware system does!*

Marco: *Studies have shown that systems such as this significantly decrease accident rates and serious injuries.*

Su: *This means that the value to our consumers is a safer travel experience. It will be cheaper too, as they will have fewer penalties for breaking rules they are not familiar with!*

Henri: *The value for Axle Car Hire is improved customer satisfaction, reduced repair costs and lower insurance premiums.*

Marco: *This type of innovation will also provide additional value for some of our partners and suppliers.*

Radhika: *For example, we've updated our contract with our fleet maintenance partner. Maintenance will now include Axle Aware. The value to our maintenance partner is the additional revenue.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Example: IT Service Desk Implementation

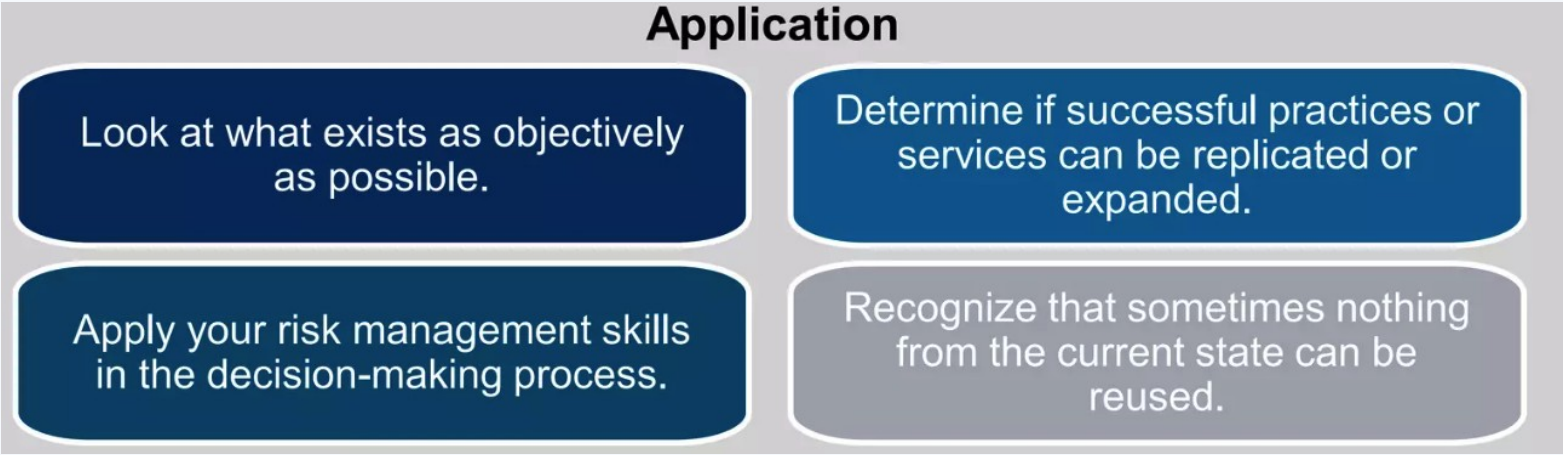

- A company is planning to implement a new IT service desk to support its employees and ensure smooth IT operations.
- Application of the Focus on Value Principle:
- Identify Stakeholders and Their Needs:
- Define Value from the Stakeholders' Perspective:
- Design Services to Deliver Value:
- Measure and Communicate Value:
- Continuous Improvement:

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Start Where You Are' Principle

Do not start over without first considering what is already available to be leveraged."

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Start Where You Are Principle

1. Avoid discarding old methods/services entirely
2. Building new from scratch often wasteful
3. Evaluate and leverage existing resources
4. Preserve valuable services, processes, people, and tools
5. Services and methods already in place should be measured and/or observed directly to properly understand their current state and what can be reused from them.
6. Those observing an activity should not be afraid to ask what may seem to be stupid questions.
7. The use of measurement is important to this principle.
8. Organizations should consider a variety of techniques to develop knowledge of the environments in which they work

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Start Where You Are

The ITIL story: Axle's booking app

Marco: *The Axle booking app was first developed two years ago. The app is no longer meeting business requirements. It can't cater for the advances in technology we're using now, such as the biometric system and the driver assistance system.*

For example, we need our app to have the capability to scan and validate our customers' fingerprints and facial images. The current coding simply can't support that. We need a new app!

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Start Where You Are

The ITIL story: Assessing the current state

Henri: *Everyone likes the idea of a new app, and IT is keen to start gathering user requirements so that we can start development. However, before we develop an entirely new app, let's assess the current state of the app we have to see if there's any functionality we can re-use.*

The current process for booking a car meets basic requirements, and doesn't need to change. We just need additional functionality. For example, the process for recording, storing, and calculating points for our loyalty programme won't change.

We should also consider the limits of the technology that our customers use. If we want to introduce biometric data recognition, users will need to have modern devices. I am not sure they all do, so we should investigate constraints and opportunities here.

Marco: *Our current booking app is working well. Incident data indicates that customers make very few **call**s to the service desk. This indicates that the current functionality is fit for use and meets customer requirements.*

Henri: *However, our focus groups indicate that customers avoid using the app because it's slow and difficult to use. Previously, upgrades focused on technology, not the requirements of our customers. We didn't have the flexibility to easily configure functionality to match new and changing service offerings. So the reliability and usability of the booking app can't be assessed solely using the data from incidents logged.*

We need to confirm these findings with other research.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Example: Improving Incident Management in an IT Department

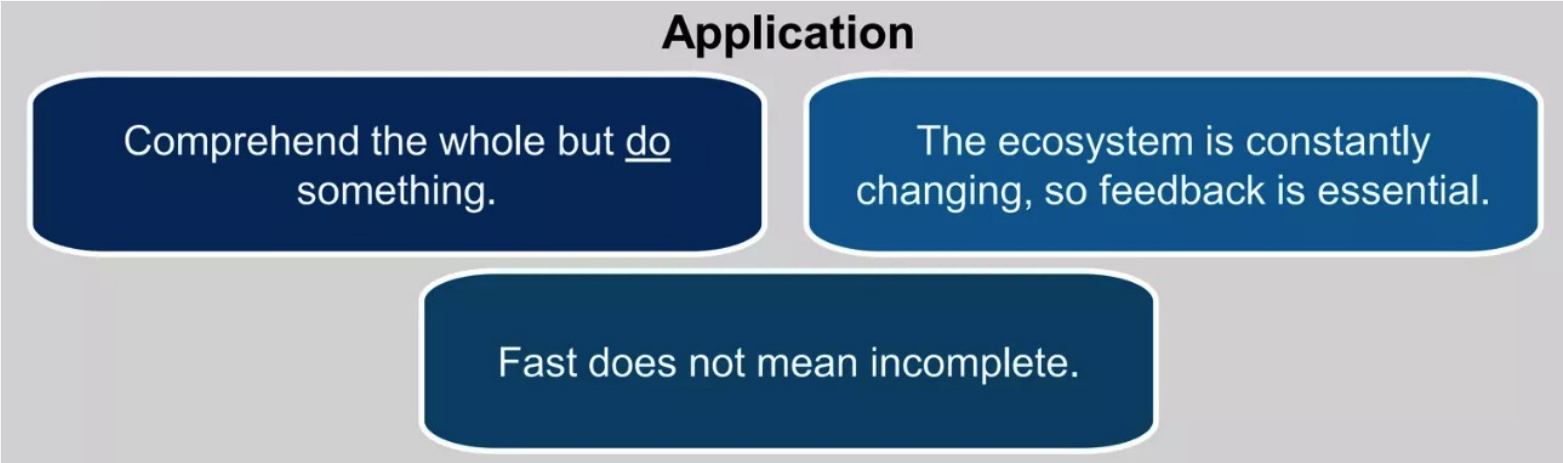

- An IT department in a medium-sized company is experiencing frequent downtime and delays in resolving incidents. The new IT manager wants to improve the incident management process but recognizes that completely overhauling the system might be disruptive.
- Application of the Start Where You Are' Principle:
- Assess Current State
- Identify Existing Strengths
- Leverage What Works
- Implement Incremental Improvements
- Monitor and Adjust
- Continuous Improvement

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Progress Iteratively with Feedback

Resist the temptation to do everything at once. Even huge initiatives must be accomplished iteratively. By organizing work into smaller, manageable sections that can be executed and completed in a timely manner, the focus on each effort will be sharper and easier to maintain.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Progress Iteratively with Feedback

1. Resist the temptation to do everything at once — even huge initiatives must be accomplished iteratively.
2. Organise work into smaller, manageable sections that can be executed and completed in a timely manner.
3. Each iteration should deliver something of value, not merely progress towards a distant end state.
4. Seek and use FEEDBACK before, throughout and after each iteration — feedback is what makes iteration work.
5. Iteration reduces risk: problems surface early, while they are still cheap to correct.

APPLYING IT

Pilot a new service desk tool with one team for two weeks, act on what they report, then extend it.

EXAM TIP

Iteration WITHOUT feedback is just phasing. The feedback loop is the point of the principle.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Progress Iteratively with Feedback

The ITIL story: Progress iteratively

Marco: *It's now been three months since Axle released the first iteration of its new app. We began by making it available solely to trusted VIP customers. We worked with their feedback to refine the booking process.*

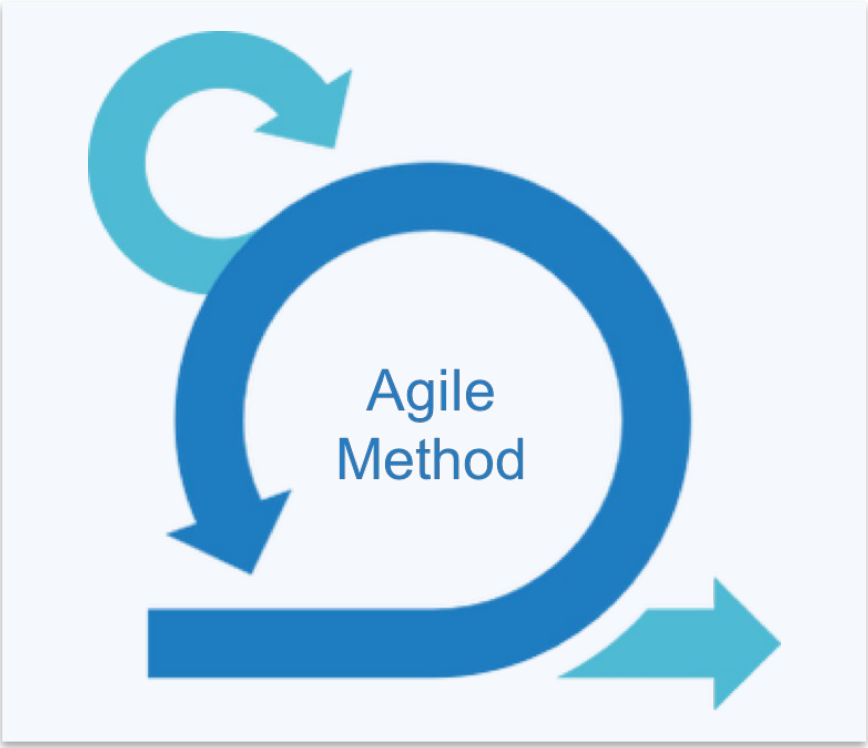

Radhika: *We learned that the app needed to be flexible so we could make changes easily based on rapidly evolving customer requirements. For example, our business customers wanted the app to automatically record distance travelled. Working with our product team, we were easily able to add this functionality.*

Su: *The app is now easily configurable, allowing Axle to quickly add new functions and features based on customer feedback.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Example: Agile

- Agile methodology is fundamentally aligned with the "Progress Iteratively with Feedback" principle, as both emphasize incremental development, continuous improvement, and responsiveness to change. Here's how Agile aligns with this principle:
- Incremental Development
- Frequent Feedback Loops
- Continuous Integration and Testing
- Customer Involvement
- Adaptive Planning
- Empowered Teams
- Small, Usable Deliverables

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Example: Implementing a New CRM System

- A sales department in a growing company decides to implement a new CRM system to better manage customer interactions, track sales activities, and improve overall efficiency.
- Application of the Progress Iteratively with Feedback Principle:
- Initial Assessment and Planning
- Phase 1: Basic CRM Implementation:
- Gather Feedback
- Phase 2: Customization and Enhancement
- Continuous Feedback and Iteration
- Phase 3: Full Deployment and Ongoing Improvement

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Collaborate and Promote Visibility

1. When initiatives involve the right people in the correct roles, efforts benefit from better buy-in and more relevance.
2. Collaboration across boundaries produces a greater likelihood of long-term success than isolated silo activity.
3. Identify and involve ALL relevant stakeholders, not only the obvious or the convenient ones.
4. Promote visibility: work that is hidden cannot be prioritised, supported or improved.
5. Poor visibility leads to poor decisions — people assume rather than know what is happening.

APPLYING IT

A visible Kanban board of live work stops leaders from adding urgent requests onto an already-saturated team.

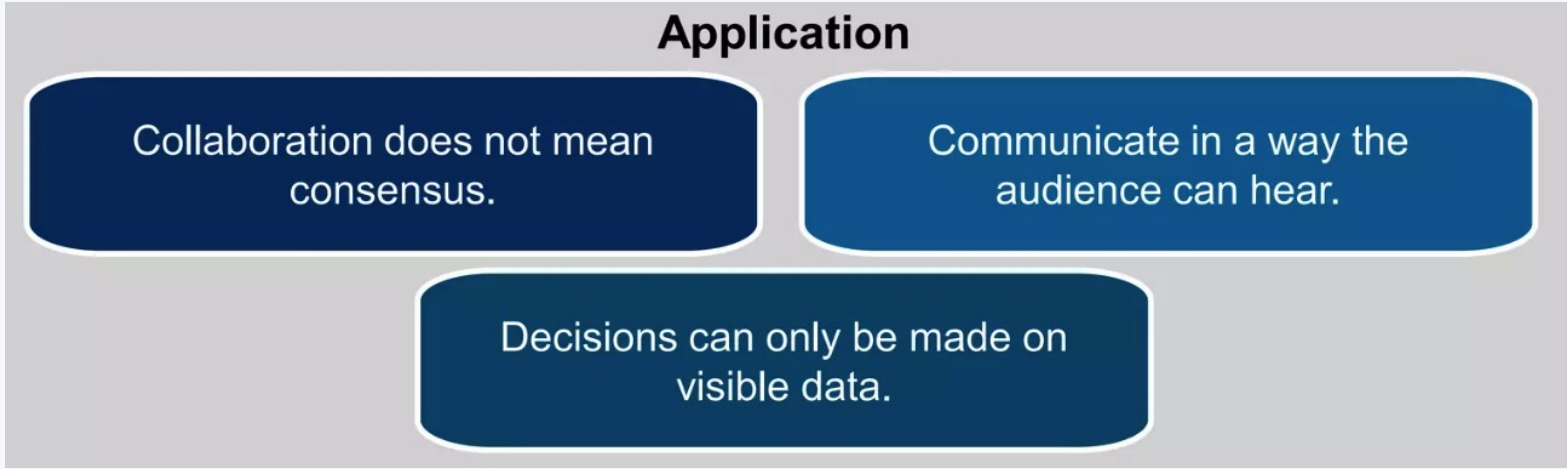

EXAM TIP

Two halves: involve the RIGHT PEOPLE, and make the work VISIBLE. Expect both in the answer.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Collaborate and Promote Visibility

Cooperation and collaboration over isolated 'silo activity. Think and work holistically to break down work silos. Effective collaboration is essential for Agile, Lean, ITSM frameworks. Real accomplishment needs information, understanding, and trust

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Collaborate and Promote Visibility’

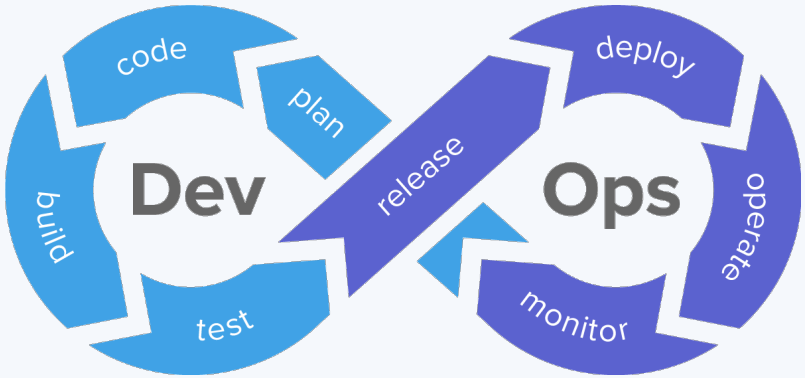

The ITIL story: Working collaboratively

Henri: *As well as being iterative, our work on the new Axle booking app is also collaborative. We include many of our teams, such as developers, testers, and support staff, and of course, our customers and users. This approach enables us to improve our services in a more responsive and targeted manner, based on feedback.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Example: DevOps

- DevOps aligns closely with the "Collaborate and Promote Visibility" principle by fostering an environment where development and operations teams work together seamlessly and transparently. Here's how:
- Cross-Functional Teams
- Shared Responsibility
- Continuous Communication
- Transparent Processes
- Feedback Loops
- Collaborative Problem-Solving

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Example: Developing a New Product Feature

- A software company decides to develop a new feature for its flagship product. This project requires collaboration across multiple departments, including product management, development, quality assurance (QA), marketing, and customer support.
- Application of the Collaborate and Promote Visibility Principle:
- Initial Planning and Collaboration
- Regular Communication and Updates
- Promote Visibility of Work
- Gathering Feedback and Making Adjustment
- Final Preparations and Launch

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Think and Work Holistically

1. No service, practice, process, department or supplier stands alone.
2. The outputs an organisation delivers to itself, its customers and other stakeholders will suffer unless it works on the whole, not just on the parts.
3. Establish an understanding of how all parts of the organisation work together in an integrated way.
4. Work towards END-TO-END delivery: optimising one step at the expense of the whole makes the service worse.
5. Apply all FOUR DIMENSIONS when planning any change — people, information and technology, partners, and value streams.

APPLYING IT

A faster deployment pipeline is no gain if the service desk is not trained to support what it now ships weekly.

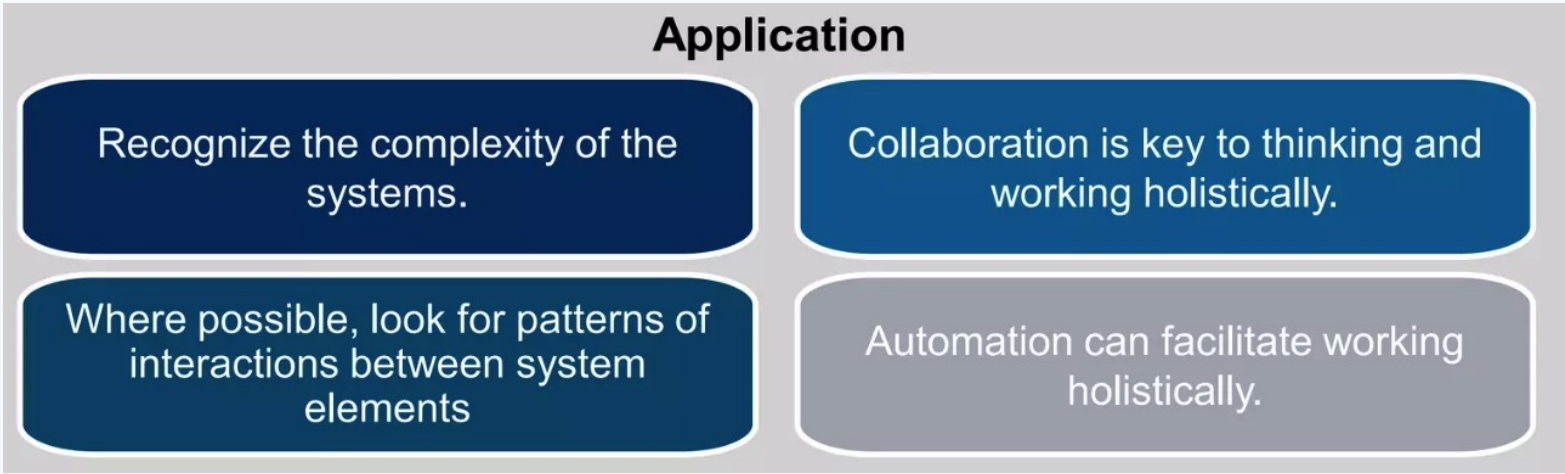

EXAM TIP

Signature phrase: 'approach activities as related to the whole rather than as separate parts'.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

‘Think and Work Holistically’ Principle

Establish an understanding of how all parts of an organization work together in an integrated way

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Think and Work Holistically

The ITIL story: Think and work holistically

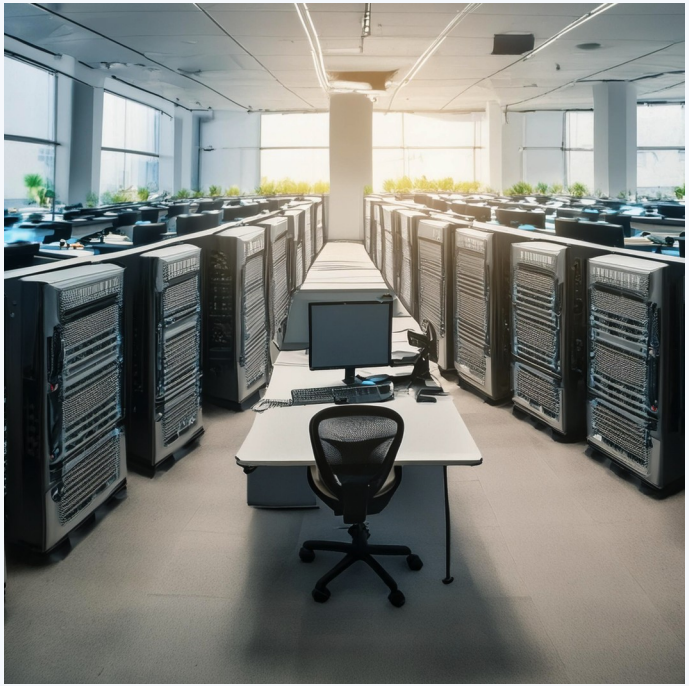

Su: *Currently, Axle is working on many initiatives. We have a schedule of iterative releases of our new booking app, as well as our Axle Aware advanced driver assistance system, and the new biometric scanning for collection and return of vehicles.*

Henri: *With so much activity, we need to understand the impacts both upstream and downstream. For example, a decision to expand our booking app with a new functionality would need to consider any resource constraints for our support teams.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Example: Implementing a New ERP System

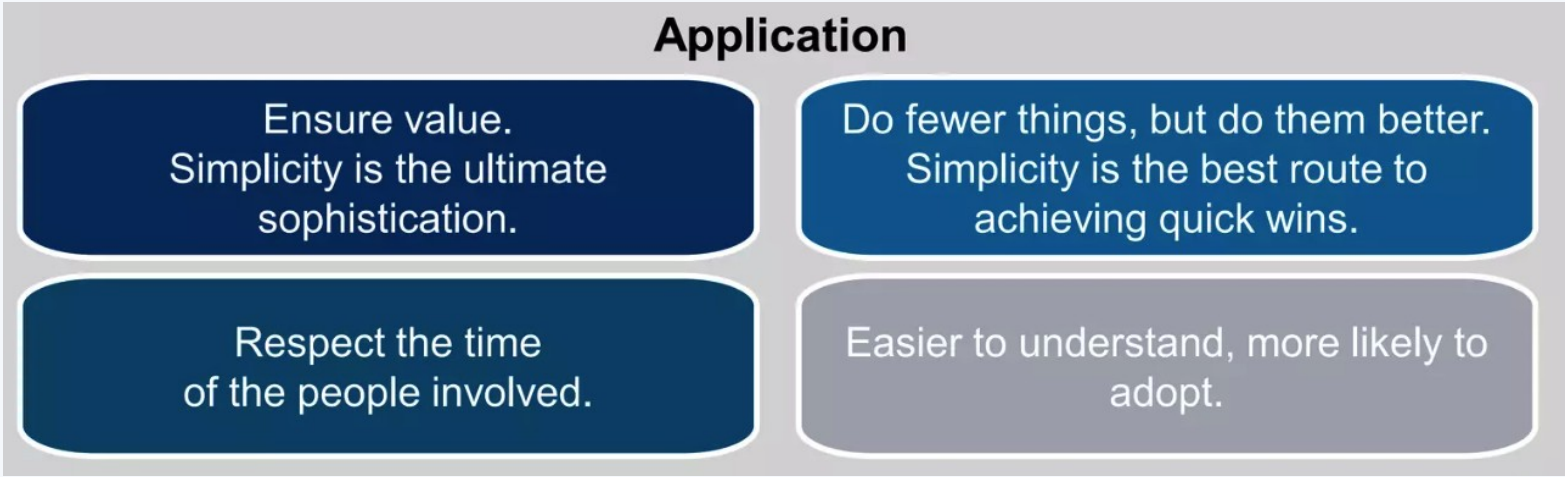

- A IT company decides to implement a new ERP system to integrate and streamline its operations, which include procurement, production, sales, inventory management, and finance.
- Application of the Think and Work Holistically Principle:
- Comprehensive Needs Assessment
- Integrated Planning
- Cross-Functional Team Collaboration
- Holistic System Design
- Comprehensive Training and Change Management
- Ongoing Monitoring and Improvement

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Keep It Simple and Practical

Always use the minimum number of steps to accomplish an objective. Outcome-based thinking should be used to produce practical solutions that deliver valuable outcomes. If a process, service, action, or metric fails to provide value or produce a useful outcome, then eliminate it.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Keep It Simple and Practical

The ITIL story: Keep it simple and practical

Su: *Axle's marketing department has indicated they would like to launch a new end-of-year promotion. The promotion would include a free upgrade to a luxury vehicle during February and the chance to win an overseas holiday.*

To enter, customers will submit an article titled 'My Best Driving Holiday Adventure'. The marketing team will then collect and analyse the customer data and create an app that targets their travel preferences.

Henri: *Our developers are already busy with an implementation schedule for biometric services. We need speed to market for this functionality. We must prioritize our work based on the expected value.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Example: Streamlining the Onboarding Process for New Employees

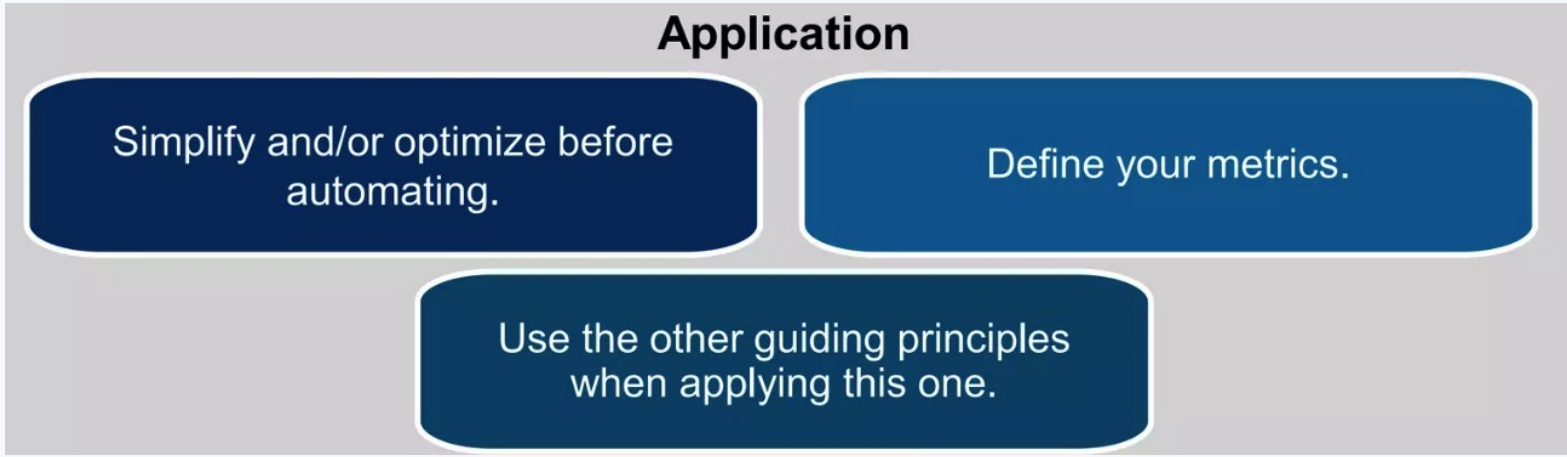

- A medium-sized IT company wants to improve its onboarding process for new employees to make it more efficient and user-friendly.
- Application of the Keep It Simple and Practical Principle:
- Current Process Assessment
- Identify Key Requirements
- Simplify Documentation
- Automate Where Possible
- Practical Training Sessions
- Feedback and Continuous Improvement

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Optimize and Automate Principle

Organizations must maximize the value of the work carried out by their human and technical resources. Technology can help organizations to scale up and take on frequent and repetitive tasks, allowing human resources to be used for more complex decision-making.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Optimize and Automate

The ITIL story: Optimize and automate

Marco: *Axle has started to trial the new biometric technology, and the tests are going well. We're keen to implement this technology in all our depots.*

Radhika: *Before Axle introduced biometrics, there were many manual, paper-based processes. Axle staff used paper checklists to carry out vehicle damage checks. Their notes then had to be entered in a database, which was only available on desktop computers. It was not real time or accessible across other systems.*

Su: *This work was usually put aside until the end of the day, and details were often lost. We had to improve the process of data capture before automating.*

Radhika: *We can automate almost anything. But let's get the business rules and processes right first.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Example: Optimizing and Automating IT Incident Management

- A large IT department in a financial services company is struggling with managing IT incidents due to a high volume of manual tasks, leading to slow resolution times and frequent errors.
- Application of the Optimize and Automate Principle:
- Initial Assessment and Optimization
- Implement Standard Operating Procedures (SOPs)
- Select Appropriate Automation Tools
- Automation Implementation
- Monitoring and Continuous Improvement
- Scaling Automation:

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Example: RPA

1. Robotic Process Automation (RPA) aligns perfectly with the "Optimize and Automate" principle by focusing on improving efficiency through process optimization and automation of repetitive tasks.
2. Identifying and Optimizing Processes
3. Automation of Repetitive Tasks
4. Integration with Existing Systems
5. Scalability
6. Continuous Monitoring and Improvement
7. Reduced Costs and Increased Efficiency

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 02

Example: RPA in Invoice Processing

A finance department in a large organization struggles with the manual processing of hundreds of invoices daily, leading to delays and errors.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 12

Knowledge Check

Which principle focusing on work in an integrated way to approach activities as related to the whole, rather than as separate parts?

a. Focus on Value

b. Keep it simple and practical

c. Optimize and automate

d. Think and work holistically

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 13

Knowledge Check

Which principle put the right people in the correct roles to ensure that initiatives have an increased likelihood of long-term success?

a. Focus on Value

b. Progress iteratively with feedback

c. Collaborate and promote visibility

d. Keep it simple and practical

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 14

Knowledge Check

Which is a recommended principle when applying ‘Focus on Value’ and “Progress iteratively with feedback’ principles?

a. Optimize and automate

b. Think and work holistically

c. Collaborate and promote visibility

d. Start where you are

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 15

Knowledge Check

Which principle understands the flow of work in progress, identify bottlenecks and excess capacity and uncover waste?

a. Keep it simple and practical

b. Optimize and automate

c. Progress iteratively with feedback

d. Collaborate and promote visibility

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 16

Knowledge Check

What describe the ‘Focus on Value’ principle? services

a. Involve the right people in the right roles

b. Establish an understanding of what is truly value to the service consumer

c. Identify what existing resources can be utilized to deliver the services

d. Establish how all the parts of the organization will work together to deliver the

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

03

TOPIC 03

The Four Dimensions of Service Management

Organizations and People · Information and Technology · Partners and Suppliers · Value Streams and Processes

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Topics

- Organizations and People
- Information and Technology
- Partners and Suppliers
- Value Streams and Processes

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Four Dimension

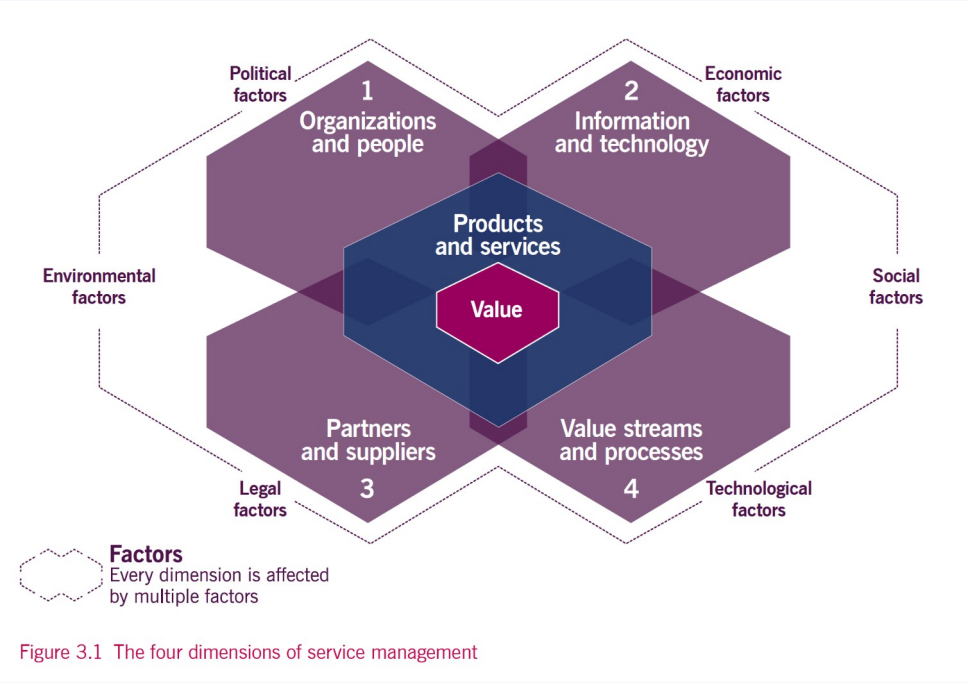

Figure 3.1 The four dimensions of service management

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Organization and People Dimension

The organization and people dimension of a service covers roles and responsibilities, leaders championing and advocating the values, communication and collaboration, shared values and attitudes, trust and transparency, and the right level of capacity and competency in the workforce, all of which are related to the creation, delivery, and improvement of a service.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Organization and People Dimension

The ITIL story: Axle's organization and people

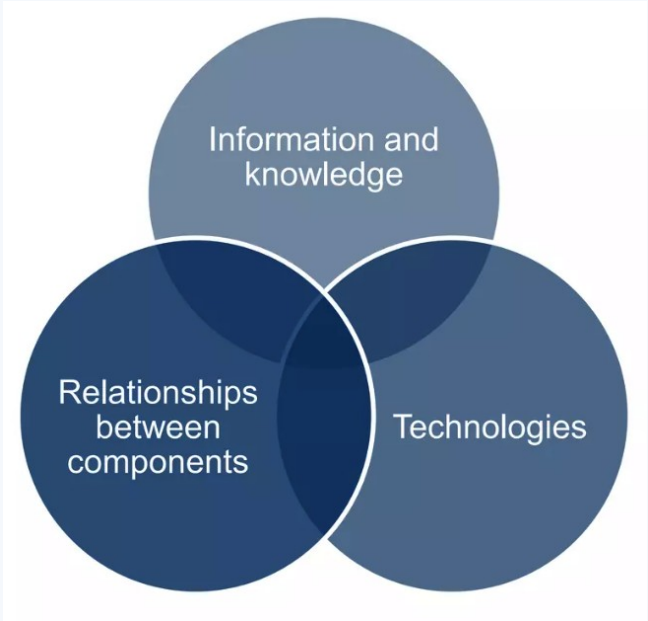

Henri: *The organizations and people dimension of Axle's car-hire services includes my IT team and other teams within the organization, such as procurement, HR, and facilities.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Information and Technology Dimension

When applied to the SVS, the information and technology dimension includes the information and knowledge necessary for the management of services, as well as the technologies required.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Supporting and enabling Technologies

1. Workflow management systems
2. Knowledge bases
3. Inventory systems
4. Communication systems
5. Analytical tools

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Information Technology Considerations

1. Is it compatible with current architecture and customers?
2. Does it raise compliance issues with policies and information security
3. controls?
4. Will it continue to be viable in the future
5. Does it align with service provider or consumer strategies?
6. Does the organization have the right skills to support and maintain it?
7. Does it have sufficient automation capabilities?
8. Does it have additional capabilities that can be leveraged?

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Information and Technology Dimension

The ITIL story: Axle's information and technology

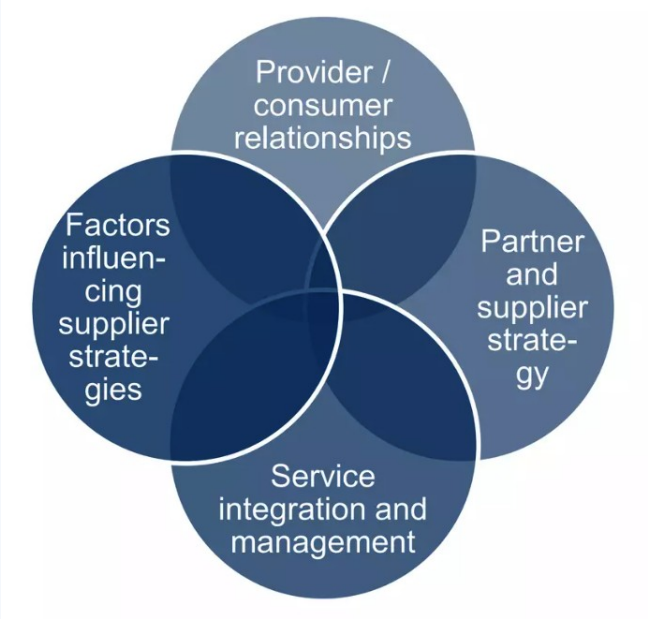

Henri: *The information and technology dimension of Axle Car Hire represents the information created and managed by teams. It also includes the technologies that support and enable our services. Applications and databases such as our booking app and financial system are part of the information and technology dimension as well.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Partners and Suppliers Dimension

The partners and suppliers dimension encompasses an organization's relations with other organizations that are involved in the design, development, deployment, delivery, support, and/or continual improvement of services.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Supplier Strategy Considerations

1. Strategic focus
2. Resource scarcity
3. Corporate culture
4. Demand patterns
5. Cost concerns
6. Subject matter expertise
7. External constraints

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Partners and Suppliers Dimension

Table 3.1 Relationships between organizations

Form of cooperation	Outputs	Responsibility for the outputs	Responsibility for achievement of the outcomes	Level of formality	Examples
Goods supply	Goods supplied	Supplier	Customer	Formal supply contract/invoices	Procurement of computers and phones
Service delivery	Services delivered	Provider	Customer	Formal agreements and flexible cases	Cloud computing (infrastructure of platform as a service)
Service partnership	Value co-created	Shared between provider and customer	Shared between provider and customer	Shared goals, generic agreements, flexible case-based arrangements	Employee onboarding (shared between HR, facilities and IT)

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Partners and Suppliers Dimension

The ITIL story: Axle's partners and suppliers

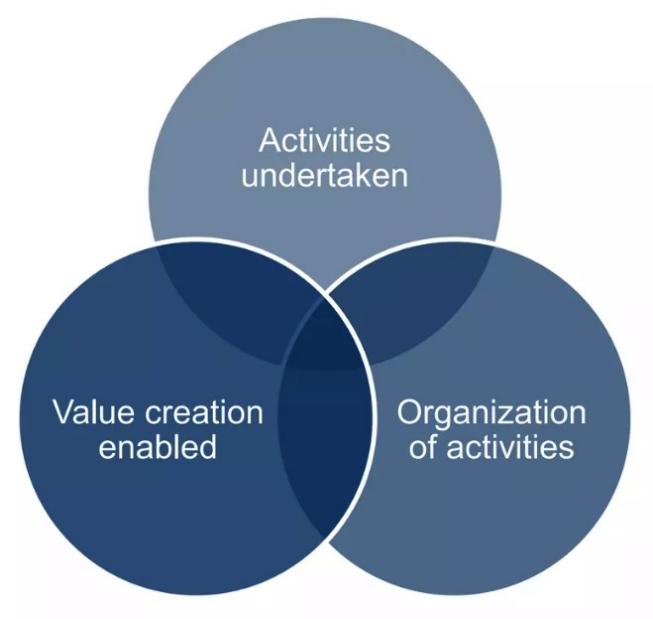

Henri: *The partners and suppliers dimension for Axle includes suppliers such as Go Go Gas and Craig's Cleaning, as well as internet service providers and developers.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Value Stream and Processes

Applied to the organization and its SVS, the value streams and processes dimension is concerned with how the various parts of the organization work in an integrated and coordinated way to enable value creation through products and services.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Value Streams

1. A VALUE STREAM is a series of steps an organisation undertakes to create and deliver products and services to consumers.
2. It is a specific combination of service value chain activities, arranged for a particular scenario.
3. Value streams are designed around the consumer's journey, not around the organisation's departments.
4. Mapping a value stream exposes bottlenecks, waste, rework and hand-off delays that no single team can see.
5. Improving the value stream is how an organisation improves the end-to-end experience rather than a local step.

A NEW-STARTER VALUE STREAM

Request → approve → provision accounts → issue laptop → grant access → confirm ready — crossing HR, IT and facilities.

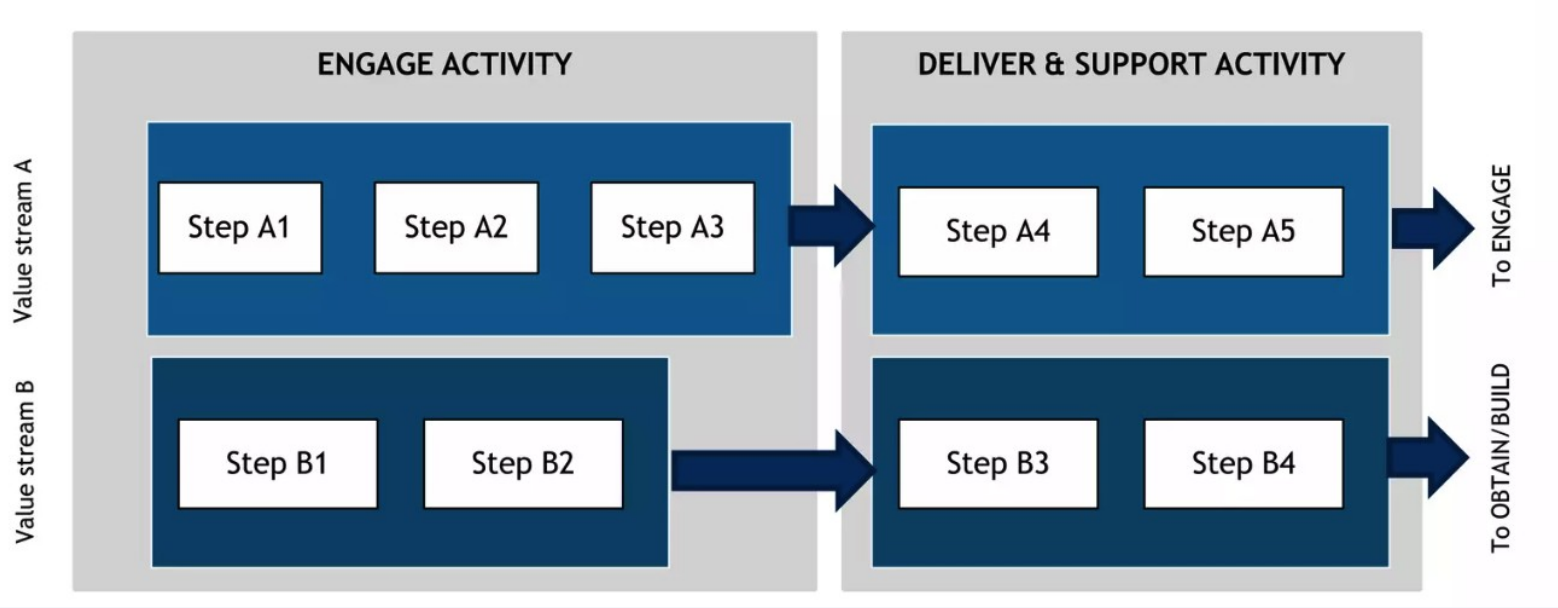

EXAM TIP

Value STREAM = the end-to-end path for one scenario. Value CHAIN = the six generic activities it draws on.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Service Value Streams

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Processes

1. A PROCESS is a set of interrelated or interacting activities that transforms inputs into outputs.
2. A process defines the sequence of actions and their dependencies — what is done, in what order, to achieve an objective.
3. Processes describe WHAT is done; procedures describe HOW; work instructions describe the detailed steps for a specific role.
4. Well-defined processes improve productivity within and across organisations, and make outcomes repeatable.
5. Processes should be designed to produce a specific outcome for a specific stakeholder — never for their own sake.

HIERARCHY IN PRACTICE

Process: handle an incident. Procedure: how the service desk triages it. Work instruction: the exact steps to reset an AD password.

EXAM TIP

Work instruction = HOW something is carried out, in detail, for one role. This exact distinction is examined.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Process

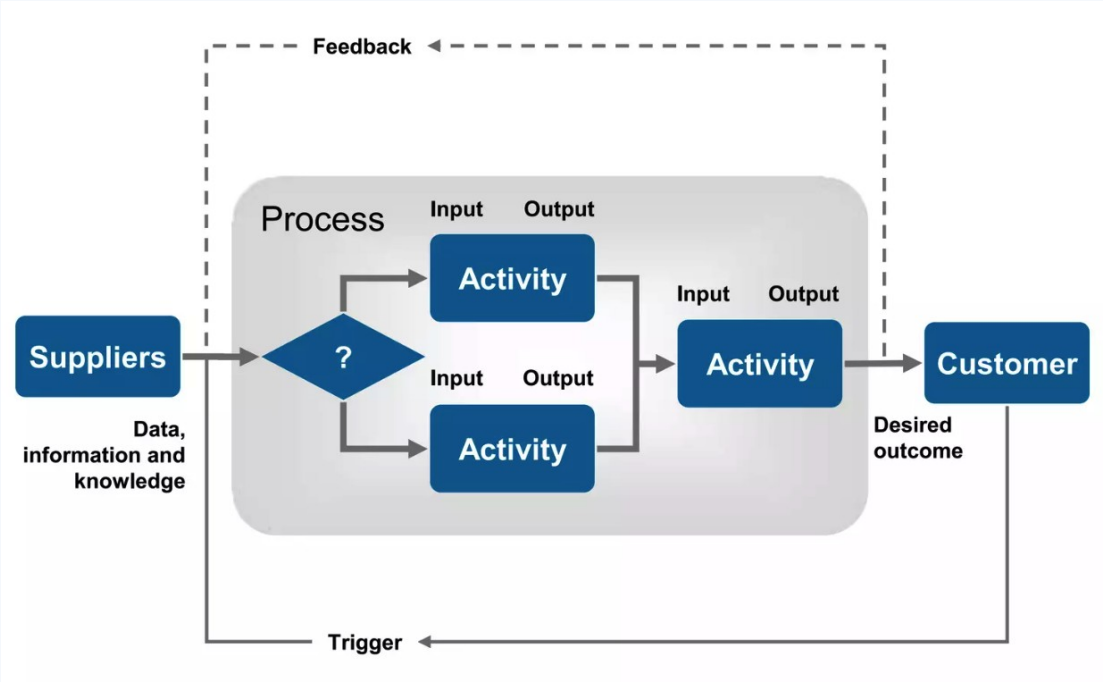

Process is a set of interrelated or interacting activities that transforms inputs to outputs. Processes define the sequence of of activities and their dependencies

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Processes

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Value Streams and Processes

The ITIL story: Axle's value streams and processes

Radhika: *The value streams and processes dimension represents the series of activities that are carried out within Axle. Value streams help Axle to identify wasteful activity and remove obstacles that hinder the organization's productivity.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 03

Value Streams and Processes — Considerations

1. The same structure applies at every level: VALUE STREAMS, then PROCESSES, then PROCEDURES, then WORK INSTRUCTIONS.
2. Ask what the value streams are for each service, and how they are currently performing.
3. Ask which activities are performed, in what order, and who is accountable for each.
4. Identify bottlenecks, unnecessary hand-offs, rework and waste — they hide in the gaps between teams.
5. Optimise the flow of work end-to-end, not the efficiency of any single step in isolation.

WHERE WASTE HIDES

A request approved in 5 minutes but waiting 3 days between two teams: the delay is entirely in the hand-off.

EXAM TIP

Structure order: value stream → process → procedure → work instruction. Learn it in that direction.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 17

Knowledge Check

Which dimension addresses the activities organization undertake, and how they are organized to efficiently and effectively enable value co-creation for stakeholders?

a Organization and people

b Information and technology

c Suppliers and partners

d Value Stream and processes

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 18

Knowledge Check

Which dimension will be more concern in relation to nature of the business of the company?

a. Organization and people

b. Information and technology

c. Suppliers and partner

d. Value Stream and processes

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 19

Knowledge Check

If a company have a comprehensive plan to manage its existing organization complexity structure for growth, which dimension is this belong to?

a. Organization and people

b. Information and technology

c. Suppliers and partner

d. Value stream and processes

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 20

Knowledge Check

Value stream is defined as: services

a. A series of procedures that organization uses to create and deliver products and

b. A series of activities flow that show organization contribute to growth

c. A series of step that organization uses to create and deliver products and services

d. Service offering from the resources through product creation

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 21

Knowledge Check

What is work instruction?

a What is carried out

b When is carried out

c Who is carried out

d How is carried out

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

04

TOPIC 04

The Service Value System

ITIL SVS · Plan · Improve · Engage · Design and Transition · Obtain/Build · Deliver and Support

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Topics

1. ITIL service value system
2. Plan
3. Improve
4. Engage
5. Design & transition
6. Obtain/build
7. Deliver & support

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

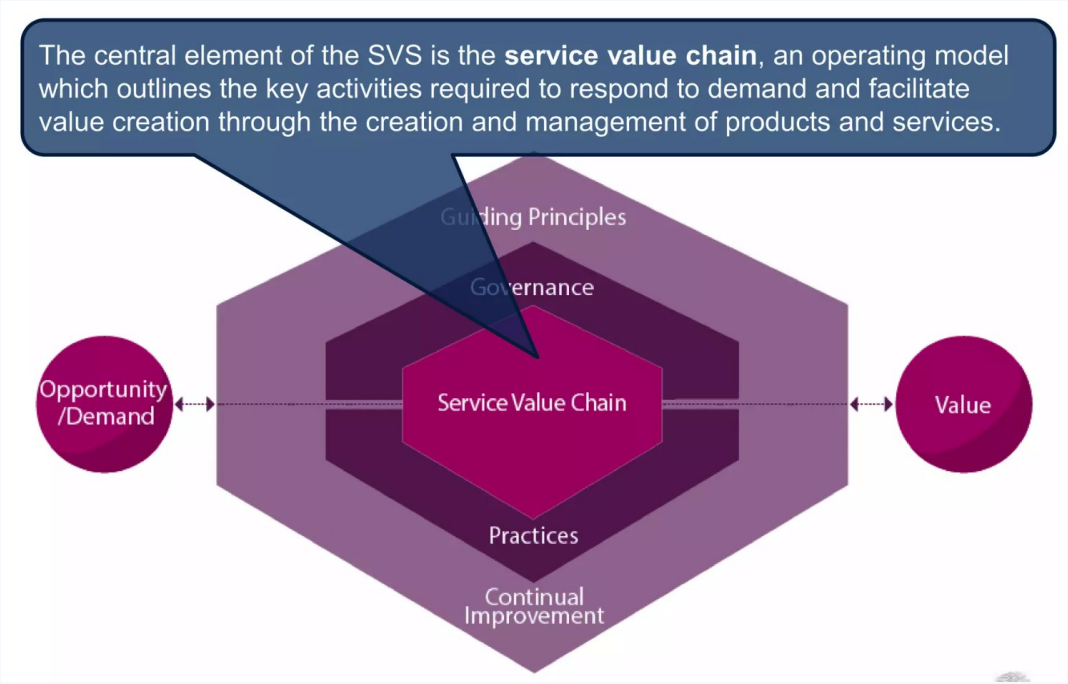

The ITIL Service Value System at a Glance

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

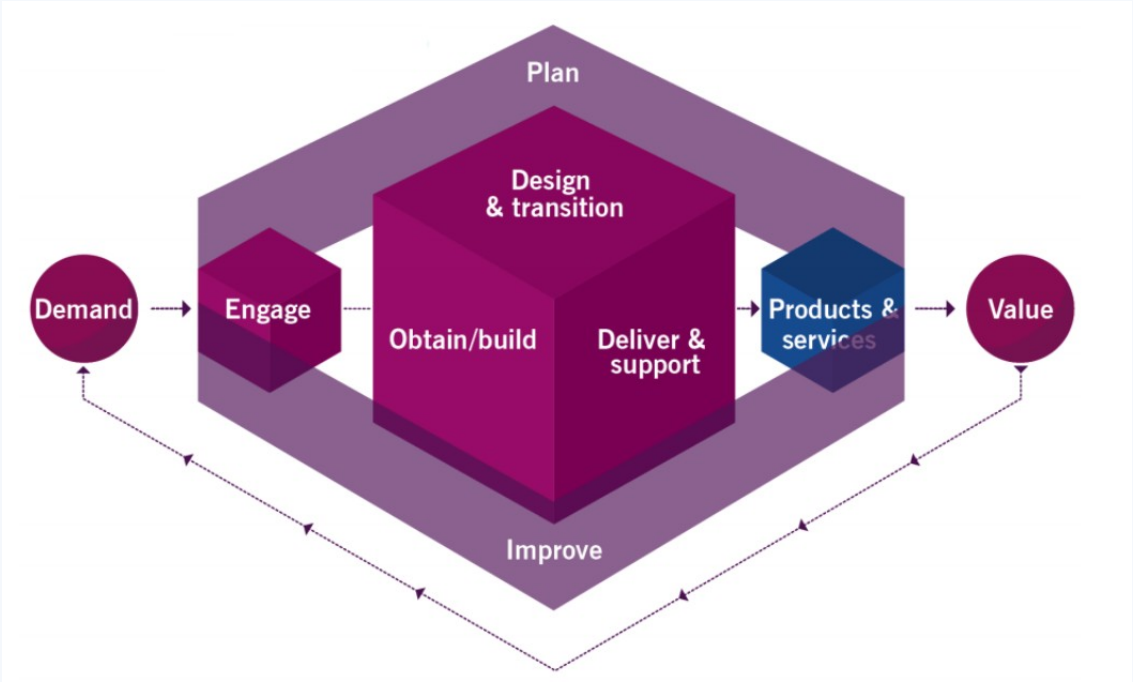

ITIL Service Value Chain

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

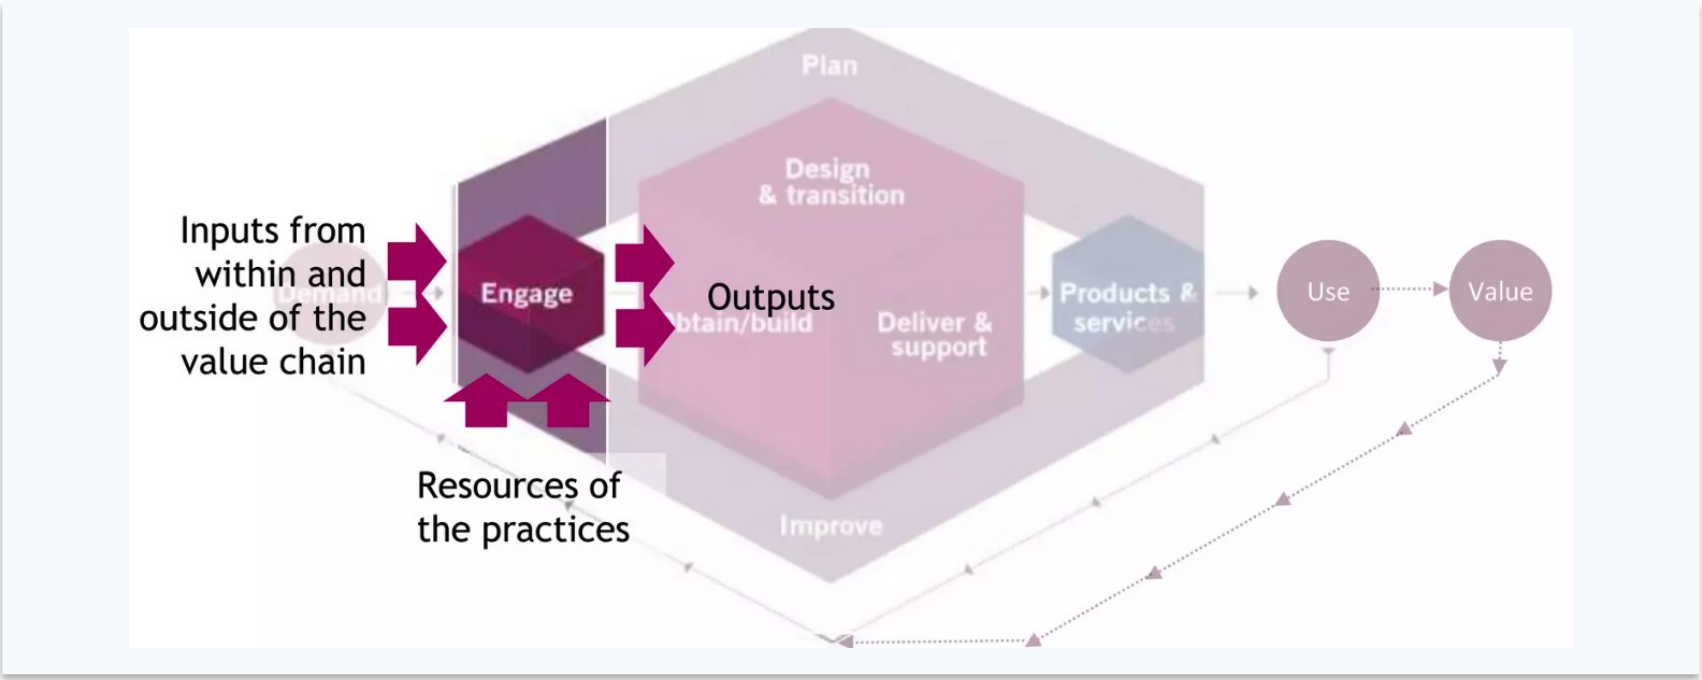

Service Value Chain Activities

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Value Stream of Activities

Service value chain activities represent the steps an organization takes in the creation of value. Each activity contributes to the value chain by transforming specific inputs into outputs. To convert inputs into outputs, the value chain activities use different combinations of ITIL practices. Each activity may draw upon internal or third-party resources, processes, skills, and competencies from one or more practices.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

The Six Service Value Chain Activities

1. PLAN — ensures a shared understanding of the vision, current status and improvement direction for all four dimensions.
2. IMPROVE — ensures continual improvement of products, services and practices across all value chain activities.
3. ENGAGE — provides a good understanding of stakeholder needs, transparency, and continual engagement and good relationships.
4. DESIGN AND TRANSITION — ensures products and services continually meet stakeholder expectations for quality, cost and time to market.
5. OBTAIN/BUILD — ensures service components are available when and where needed, and that they meet agreed specifications.
6. DELIVER AND SUPPORT — ensures services are delivered and supported according to agreed specifications and expectations.

THEY INTERCONNECT

'Engage' captures a requirement, 'design and transition' shapes it, 'obtain/build' assembles it, 'deliver and support' runs it.

EXAM TIP

Learn the one-sentence PURPOSE of each activity — they are examined by their opening phrase.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Plan — Value Chain Activity

1. PURPOSE: to ensure a shared understanding of the vision, current status and improvement direction for all four dimensions and all products and services across the organisation.
2. Plan sets direction; it does not do the work — it makes sure everyone is heading the same way.
3. Key inputs: policies, requirements and constraints from governance; consolidated demand and opportunity; improvement initiatives.
4. Key outputs: strategic, tactical and operational plans; portfolio decisions; architectures and policies.
5. Applies at every level — enterprise strategy down to the plan for a single service.

TYPICAL TRIGGER

Annual service portfolio review deciding which services to invest in, sustain or retire.

EXAM TIP

If a question mentions 'vision, current status and improvement direction', the answer is PLAN.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Improve — Value Chain Activity

1. PURPOSE: to ensure continual improvement of products, services and practices across all value chain activities and all four dimensions.
2. Improve is a value chain ACTIVITY; continual improvement is also an SVS component and a PRACTICE — the same idea at three levels.
3. Improvement work is driven by measurement: you cannot improve what you do not measure.
4. Key inputs: performance information, stakeholder feedback, improvement opportunities from every other activity.
5. Key outputs: improvement initiatives and plans, updated performance information, value chain performance reports.

TYPICAL TRIGGER

Repeat incidents on one service prompt a problem review and a permanent fix rather than another restart.

EXAM TIP

Improve appears in the value chain AND as a practice AND as an SVS component — all three are examinable.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

PDCA Cycle (Deming Cycle)

1. PDCA (Plan-Do-Check-Act) is a cyclic process used for continuous improvement of processes and products. It is also known as the Deming Cycle or Shewhart Cycle. The cycle consists of four steps:

2. Plan: Identify an opportunity for improvement and plan for change. This involves setting objectives and processes necessary to deliver results in accordance with the expected output.

3. Do: Implement the plan on a small scale first to test its effectiveness. This is the phase where the plan is put into action, and data is collected for analysis.

4. Check: Study the results of the implementation and compare them against the expected outcomes. This step involves analyzing the data and identifying any differences between the actual and planned outcomes.

5. Act: Based on the results of the Check step, take action to standardize the successful improvements or make necessary adjustments if the results were not as expected. This may involve refining the plan and repeating the cycle.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

The PDCA / Deming Cycle

1. PDCA — Plan, Do, Check, Act — is a cyclic method for the continual improvement of processes and products.
2. PLAN: identify the problem and objective, and design the change to be tested.
3. DO: implement the change, ideally on a small scale first.
4. CHECK: measure the result against the objective set in the Plan step, using evidence.
5. ACT: if it worked, standardise and roll it out; if not, adjust and run the cycle again.
6. It is a CYCLE, not a project — it repeats, which is exactly what makes improvement continual.

A FULL TURN

Plan: inconsistent machine settings cause defects. Do: standardise on one line. Check: defects fall 40%. Act: roll out to all lines.

EXAM TIP

PDCA maps onto the continual improvement model — both check the result against a baseline before standardising.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Engage — Value Chain Activity

1. PURPOSE: to provide a good understanding of stakeholder needs, transparency, and continual engagement and good relationships with all stakeholders.
2. Stakeholders include customers, users, sponsors, suppliers, partners, regulators and internal teams.
3. Engage is the primary point of contact with the outside world — it is where demand and feedback enter the SVS.
4. Key inputs: consumer demand, user requests and incidents, supplier information, market opportunity.
5. Key outputs: consolidated demand and opportunity, service performance reports, contract and agreement requirements.

TYPICAL TRIGGER

A quarterly service review with the customer that reshapes the improvement backlog.

EXAM TIP

'Transparency and good relationships with ALL stakeholders' is the signature phrase for ENGAGE.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Design and Transition — Value Chain Activity

1. PURPOSE: to ensure products and services continually meet stakeholder expectations for QUALITY, COST and TIME TO MARKET.
2. Covers design of the service and its transition into live operation — including testing, validation and release readiness.
3. Considers all four dimensions, not only the technology.
4. Key inputs: portfolio decisions, requirements from engage, improvement initiatives, service components from obtain/build.
5. Key outputs: requirements and specifications for obtain/build, new and changed services, contract requirements.

TYPICAL TRIGGER

A new customer portal moving from design sign-off through UAT to a controlled go-live.

EXAM TIP

Three words identify this activity: quality, cost, time to market.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Obtain / Build — Value Chain Activity

1. PURPOSE: to ensure service components are available when and where they are needed, and that they meet agreed specifications.
2. Components may be built in-house or obtained from a supplier — the make-or-buy decision sits here.
3. Make: builds internal expertise and control, but costs time and capacity.
4. Buy: uses supplier expertise and speed, but creates dependency and less control.
5. Key outputs: service components, change requests, knowledge and information about components.

MAKE OR BUY

Building a bespoke CRM gives exact fit; licensing one gives faster delivery and a supported upgrade path.

EXAM TIP

'Available when and where needed, meeting specifications' points to OBTAIN/BUILD.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Make or Buy Decision

1. ABC Manufacturing needs to decide whether to produce Widget X in-house or continue buying it from a supplier.

2. Factors:

3. Cost Analysis:

4. Make: $500,000 initial investment (amortized over 5 years: $100,000/year) + $400,000 annual costs = $500,000/year.

5. Buy: $400,000/year.

6. Quality Control:

7. Make: Better quality control and consistency.

8. Buy: Dependent on supplier's quality.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Obtain or Build Value Chain Activity

1. Core Competencies:
2. Make: Enhances internal expertise.
3. Buy: Focuses on core activities, uses supplier expertise.
4. Capacity:
5. Make: Requires additional capacity.
6. Buy: No extra capacity needed.
7. Decision:
8. Cost: Buying is cheaper at $400,000/year vs. $500,000/year for making.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Deliver and Support — Value Chain Activity

1. PURPOSE: to ensure services are delivered and supported according to agreed specifications and stakeholders' expectations.
2. This is the activity users experience day to day — it is where the service actually runs.
3. Includes handling incidents and service requests, and performing routine operational tasks.
4. Key inputs: new and changed services, service components, user requests and incidents from engage.
5. Key outputs: services delivered to consumers, information on completed tasks, change requests and improvement opportunities.

TYPICAL TRIGGER

A user cannot access a shared drive: logged at engage, restored at deliver and support.

EXAM TIP

Delivery AND support together — this activity covers both running the service and fixing it.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Example of Service Value Chain

Example of a service value chain, its practices, and value streams

A mobile application development company has a value chain, enabling the full cycle of application development and management, from business analysis to development, release, and support. The company has developed a number of practices, supported with specialized resources and techniques:

- business analysis
- development
- testing
- release and deployment
- support.

Although the high-level steps are universal, different products and clients need different streams of work. For example:

- The development of a new application for a new client starts with initial engagement (pre-sale), then proceeds to business analysis, prototyping, the drawing up of agreements, development, testing, and eventually to release and support.
- Changing an existing application to meet new requirements of existing clients does not include pre-sale and involves business analysis, development, testing, and support in a different way.
- Fixing an **error** in a live application may be initiated in support, proceed with rolling back to a previous stable version (**release**), then moves to development, testing, and release of a fix.
- Experiments with new or existing applications to expand the target audience may start with innovation planning and prototyping, then proceed to development, and eventually to a **pilot** release for a limited group of users to test their perception of the changes made.

These are examples of value streams: they combine practices and value chain activities in various ways to improve products and services and increase potential value for the consumers and the organization.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Service Value Chain

The ITIL story: Value chains and value streams

Henri: *At Axle Car Hire, the value chain is the way that our company operates. It has multiple value streams. Each value stream adopts and adapts the activities of the value chain for carrying out particular tasks. For example, there is one value stream for innovation, and another for providing standard services to existing customers.*

The value stream for providing standard services to existing customers represents the activities that are carried out when a customer hires a car. This starts with engagement, when a customer contacts Axle, and then proceeds to delivery, when they receive a car (although engagement can still happen at this stage).

Some value chain activities may be ongoing throughout a particular value stream, or may not be involved at all. In this stream, planning activity is continuous, but design and procurement activities will typically not be involved. The stream ends with more engagement activities, when cars are returned by customers, feedback is given, and orders are closed.

Marco: *Value chain activities do not have to happen in a particular order. Axle's innovation value stream is triggered by opportunity, and then goes to planning, designing, building or obtaining, transitioning, and finally to delivering. This stream often includes procurement activities. For example, we procure software and hardware for our biometric solutions.*

Henri: *We manage value streams for different objectives, combining the value chain activities and supporting them with practices. Every value stream should be effective and efficient, and subject to continual improvement.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Continual Improvement

1. PURPOSE: to align the organisation's practices and services with changing business needs, through ongoing identification and improvement of every element involved in the management of products and services.
2. Continual improvement appears three times in ITIL 4: as an SVS component, a value chain activity, and a practice.
3. It applies to every element — services, practices, processes, relationships and the four dimensions.
4. Everyone contributes: it is not the job of a dedicated improvement team alone.
5. Improvement ideas are captured in a CONTINUAL IMPROVEMENT REGISTER (CIR) so nothing is lost.

THE REGISTER

A CIR lets a small idea from a service-desk agent be assessed and prioritised alongside a strategic initiative.

EXAM TIP

The database or structured document used to track improvement ideas is the Continual Improvement Register (CIR).

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Continual Improvement Model

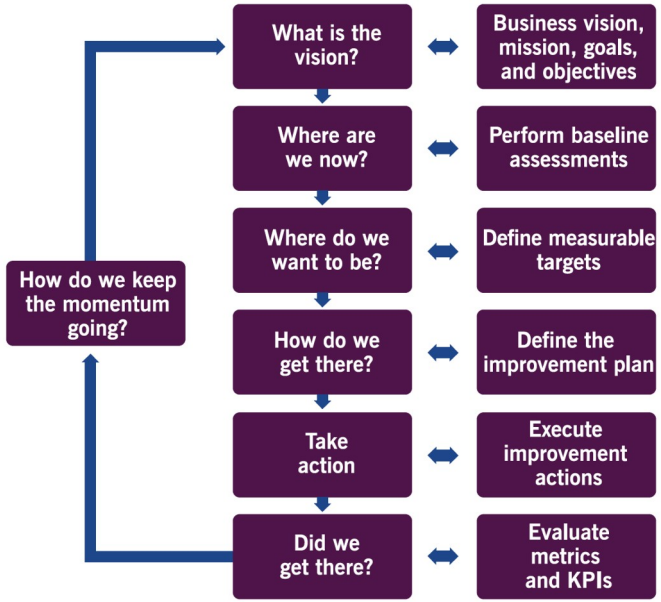

Figure 4.3 The continual improvement model

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Continual Improvement Model

The ITIL story: Improving Axle

Henri would like Axle to become a greener company and introduce more environmentally friendly practices into its work. Over the following sections the Axle team uses the steps of the continual improvement model to implement changes to the organization.

Henri: *At Axle we strive for continual improvement at all levels. One of our objectives is to be a greener business and incorporate sustainable principles into every business decision. My team is committed to this initiative. As part of our service relationship model, our partners and suppliers are also involved in this.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Step 1 — What Is the Vision?

1. Every improvement initiative must support the organisation's goals and objectives.
2. This step sets the vision and defines what success will look like before any work begins.
3. It translates organisational vision into a vision for THIS specific improvement.
4. Stakeholders must understand and buy into the vision, or the improvement will stall later.
5. Skipping this step is the most common reason an improvement delivers change nobody wanted.

A CLEAR VISION

'Cut new-starter setup from 5 days to 1' — measurable, time-bound, and obviously tied to a business goal.

EXAM TIP

Step 1 is about DIRECTION, not measurement. 'Where are we now?' is Step 2.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Step 1: What is the vision?

The ITIL story: What is the vision?

Henri: *Axle's vision is for the business to become one of the top three green car-hire companies globally. A continual improvement initiative called Axle Green was created for this purpose.*

Craig: *As a supplier of cleaning services to Axle, I'll support them in this improvement initiative.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Step 2 — Where Are We Now?

1. The success of an improvement depends on a clear, accurate understanding of the starting point.
2. This step performs an objective, evidence-based CURRENT-STATE ASSESSMENT — a baseline.
3. Assess existing services, ways of working, people, technology, partners and processes.
4. The assessment must be honest: an inaccurate baseline makes every later measurement meaningless.
5. Without a baseline you cannot demonstrate at Step 6 that the improvement actually worked.

THE BASELINE

Measure the real current setup time — 5.2 days on average — before promising an improvement to 1 day.

EXAM TIP

Step 2 = the BASELINE. It is what Step 6 measures against.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Step 2: Where are we now?

The ITIL story: Where are we now?

Su: *We need to understand the baseline. How do we know if we've improved, if we don't know where we started? Currently, only 5 per cent of the vehicles in our fleet are electric.*

Craig: *Only 20 per cent of my cleaning products are biodegradable.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Step 3 — Where Do We Want to Be?

1. Step 2 describes Point A; Step 3 describes Point B — the target state.
2. Perform a GAP ANALYSIS between the current state and the desired state.
3. Define measurable targets and critical success factors, plus the KPIs that will show progress.
4. The target must be realistic in the light of Step 2's honest baseline.
5. The size of the gap determines whether one iteration is enough or several will be needed.

GAP ANALYSIS

Current 5.2 days, target 1 day: a 4.2-day gap, likely to need several iterations rather than one change.

EXAM TIP

Step 3 is where GAP ANALYSIS and measurable targets belong.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Step 3: Where do we want to be?

The ITIL story: Where do we want to be?

Su: *Within five years, we want 50 per cent of our fleet to consist of electric vehicles. The other half should comply with the strictest ecological requirements for petrol and diesel cars.*

Craig: *One of my targets is that 90 per cent of my cleaning products will be biodegradable within the next two years.*

Radhika: *This is a great initiative. In our IT team, we want to use biodegradable cups. We would also like Axle to use environmentally friendly light bulbs in all our offices.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Step 4 — How Do We Get There?

1. This step produces the plan — the route from Point A to Point B.
2. The plan may be a direct route for a simple improvement, or an iterative series of changes for a complex one.
3. Applying 'progress iteratively with feedback' here reduces risk and surfaces problems early.
4. Experiments and pilots are legitimate: the best route is not always known in advance.
5. Each iteration should deliver something of value, not just progress towards a distant end state.

ITERATING

Automate account creation first (5.2 → 3 days), then laptop imaging, then access approval.

EXAM TIP

Step 4 is the PLAN. Executing it is Step 5.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Step 4: How do we get there?

The ITIL story: How do we get there?

Craig: *My plan is to replace our current stocks of cleaning products with biodegradable options as we run out. Meanwhile, we'll test new products to find the optimal balance of price and quality.*

Su: *Sometimes knowing how you get there is easy, but replacing half of our fleet with electric cars is a bigger challenge. We don't want excess cars in our car lots if they're not being used. We must also consider specifics and infrastructure in different countries, as well as local regulations.*

Radhika: *We're encouraging the use of ceramic cups over plastic ones. We're discontinuing the purchase of plastic cups, and we are buying ceramic cups for all our offices.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Step 5 — Take Action

1. In this step the plan for the improvement is acted upon — the work is actually done.
2. The approach may be traditional and sequential, or agile and iterative with experiments.
3. Change enablement, project management and organisational change management all support this step.
4. Progress must be tracked, and the plan adjusted when reality differs from expectation.
5. Communication matters as much as delivery: people affected by the change need to know what is happening.

TAKING ACTION

Building and releasing the automated account-creation workflow into production.

EXAM TIP

Step 5 is EXECUTION. Checking whether it worked is Step 6.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Step 5: Take action

The ITIL story: Take action

Craig: *We have started to replace our stocks of cleaning products with biodegradable options. We've found some great new products to use, and even managed to save money by using cheaper alternatives that don't compromise on quality.*

Su: *We have started to phase out some of our older petrol and diesel cars and replace them with new electric models. We have carried out a thorough check of the petrol and diesel cars we are keeping to ensure they meet ecological requirements, and will take action to fix this where they do not.*

Radhika: *We have brought the new biodegradable cups and environmentally friendly light bulbs into our offices and started to remove the plastic cups.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Step 6 — Did We Get There?

1. It is too often assumed that once an improvement is in motion, the expected benefits were achieved.
2. This step CHECKS the outcome against the Step 2 baseline and the Step 3 targets, using evidence.
3. If the target was met, confirm and communicate it with data.
4. If it was not, that is not a failure — it is information. Return to an earlier step and iterate.
5. Honest measurement here is what separates real improvement from an assumption of improvement.

CHECKING

Measured setup time now 1.4 days: a genuine gain, short of the 1-day target — so iterate again.

EXAM TIP

Step 6 verifies against the BASELINE from Step 2. This link is examined.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Step 6: Did we get there?

The ITIL story: Did we get there?

Craig: *After a few months we managed to hit our target of having 90 per cent of our products being biodegradable.*

Su: *The electric cars are being introduced, but for logistical reasons it is proving more difficult to replace the petrol and diesel cars than we had anticipated. We will need to do this at a faster pace if we want to hit our five-year target. We may now have to reconsider our target, and decide whether we should do more to support it, or if it needs to be revised.*

Radhika: *Our offices now have biodegradable cups and environmentally friendly light bulbs. Some of the old plastic cups are still being used, but we have stopped purchasing more, so once they run out they'll be gone.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Step 7 — How Do We Keep the Momentum Going?

1. If the improvement delivered the expected value, the focus shifts to MARKETING that success and reinforcing the new ways of working.
2. Embed the change so the organisation does not quietly drift back to the old behaviour.
3. Share the result: visible success builds support and appetite for the next improvement.
4. Update documentation, training and the continual improvement register.
5. Momentum is the point — continual improvement is a recurring activity, not a one-off project.

KEEPING MOMENTUM

Publishing the setup-time result to the business, then opening the next improvement from the CIR.

EXAM TIP

Step 7 is about REINFORCING and MARKETING the improvement so it sticks.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 04

Step 7: How do we keep the momentum going?

The ITIL story: How do we keep the momentum going?

Craig: *Now that we have hit our target we will monitor any new products we buy to ensure that they meet our standards of being biodegradable. We will also be on the lookout for any opportunities to replace our remaining non-biodegradable products with more environmentally friendly alternatives.*

Su: *We've made a great start on adding new electric vehicles to the Axle fleet, but haven't hit our targets yet. Now we need to analyse what has prevented us from reaching our objectives, record what lessons we have learned, and decide what can be done differently in the future to make the introduction of electric cars more effective.*

Radhika: *We will continue to buy ceramic cups and environmentally friendly light bulbs for our offices. We will also consider further ways to make our offices greener, and run campaigns with staff members to encourage them to become more environmentally aware.*

QUIZ 22

Knowledge Check

Which value chain activity provides a good understanding of stakeholder needs, and promotes transparency, continual engagement and good relationships with all stakeholders?

a Obtain or build

b Plan

c Improve

d Engage

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 23

Knowledge Check

Which value chain activity to ensure that service components are available when and where needed, and that they meet agreed-upon specifications?

a Engage

b Design and transition

c Obtain or build

d Plan

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 24

Knowledge Check

Which value chain activity to ensure that products and services continually meet stakeholder expectations for quality, cost and time to market?

a Plan

b Improve

c Deliver and support

d Design and transition

Topics

1. ITIL Practices
2. Continual improvement
3. Change enablement
4. Incident management
5. Problem management
6. Service request management
7. Service desk
8. Service level management

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

What Is a Practice?

1. A PRACTICE is a set of organisational resources designed for performing work or accomplishing an objective.
2. ITIL 4 defines 34 practices, grouped into three categories.
3. GENERAL MANAGEMENT practices (14) — adopted from general business, e.g. continual improvement, information security management, relationship management, supplier management.
4. SERVICE MANAGEMENT practices (17) — developed in service management, e.g. incident management, problem management, change enablement, service desk, service level management.
5. TECHNICAL MANAGEMENT practices (3) — adapted from technology management, e.g. deployment management, infrastructure and platform management, software development and management.

PRACTICES, NOT PROCESSES

A practice includes the people, tools, information and processes needed — it is broader than a process alone.

EXAM TIP

34 practices in 3 groups: 14 general management, 17 service management, 3 technical management.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

The 34 ITIL Practices — Three Groups

1. A practice is a set of organisational resources designed for performing work or accomplishing an objective.
2. GENERAL MANAGEMENT PRACTICES (14) — adopted from general business management, e.g. continual improvement, information security management, relationship management, supplier management.
3. SERVICE MANAGEMENT PRACTICES (17) — developed within service management, e.g. incident management, problem management, change enablement, service desk, service level management.
4. TECHNICAL MANAGEMENT PRACTICES (3) — adapted from technology management: deployment management, infrastructure and platform management, and software development and management.
5. A practice is broader than a process: it includes the people, tools, information and processes required to do the work.

WHY 'PRACTICE' NOT 'PROCESS'

Incident management needs a process, but also trained agents, a tool, a knowledge base and an escalation path.

EXAM TIP

34 practices = 14 general + 17 service + 3 technical. The three technical ones are worth memorising.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

ITIL Practices

TOPIC 05

General Management Practices

- Continual Improvement
- Information Security Management
- Relationship Management
- Supplier Management

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Information Security Management

1. PURPOSE: to protect the information needed by the organisation to conduct its business.
2. Covers CONFIDENTIALITY (only the right people see it), INTEGRITY (it is accurate and complete) and AVAILABILITY (it is there when needed).
3. Also covers authentication (the person is who they claim) and non-repudiation (an action cannot later be denied).
4. Security must balance PROTECTION against AVAILABILITY — controls so tight that nobody can work have failed.
5. It is a general management practice: it applies across every service, not only to IT systems.

THE BALANCE

Mandatory MFA on a clinical system protects records, but must not lock a clinician out during an emergency.

EXAM TIP

CIA — confidentiality, integrity, availability — is the core of this practice.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Information Security Management

The ITIL story: Axle's information security management

Su: *Our travel app stores a lot of sensitive data, including customer and credit card details. Our role is to make sure this data is secure.*

Marco: *Some of the data is also stored and processed by our partners, who helped us to develop the app and continue to support the app on our behalf.*

Radhika: *We use the data to analyse customer demand and the use of our fleet, track the conditions of our cars, and analyse our customers' preferences to create tailored offerings.*

Su: *Our consumers need to know that their data is safe and will not be misused. We regularly undergo external audits to provide assurance for our stakeholders and to confirm compliance with national and international regulations.*

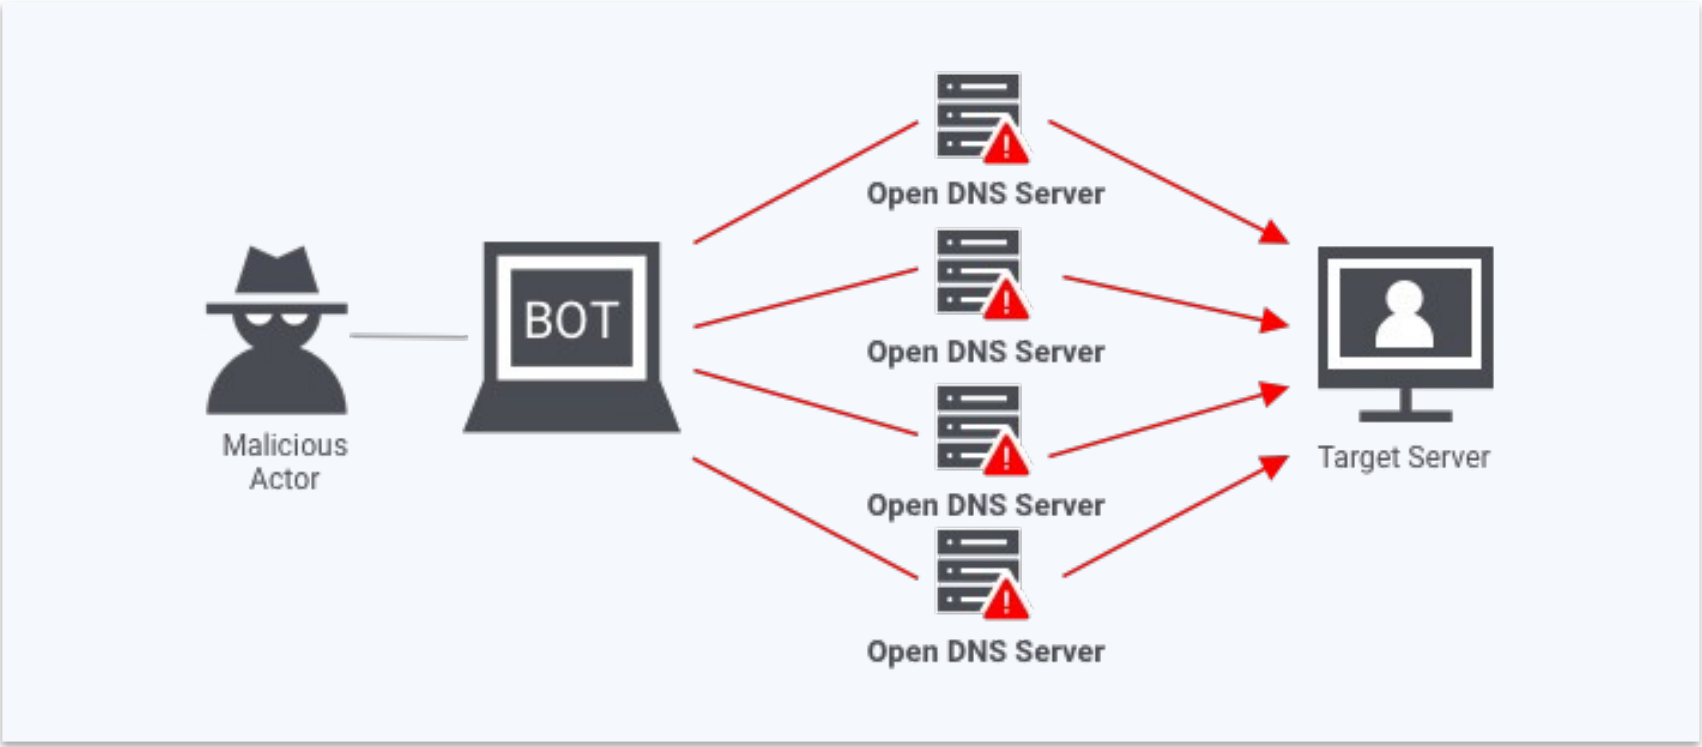

Henri: *As CIO, I make sure everyone who works in and with Axle is aware of the importance of information security, and follows Axle policies and procedures concerning information security management.*

TOPIC 05

Scenario: Implementing Information Security Management

- ABC Corporation is a mid-sized company providing IT services to various clients. The company has been growing rapidly and has decided to adopt ITIL best practices to improve its IT service management. One of the critical areas identified for improvement is Information Security Management (ISM) to ensure the confidentiality, integrity, and availability of information asset
- Objectives:
- Establish a robust Information Security Management System (ISMS) in line with ITIL guidelines.
- Protect sensitive data from unauthorized access and breaches.
- Ensure compliance with relevant regulations and standards.
- Enhance trust with clients by demonstrating strong security practices.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Scenario: Implementing Information Security Management

- Key Stakeholders:
- IT Security Manager
- Service Desk Manager
- IT Operations Team
- Compliance Officer
- Business Unit Managers
- External Auditors
- Implementation Steps:

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Relationship Management

1. PURPOSE: to establish and nurture the links between the organisation and its stakeholders at strategic and tactical levels.
2. Covers the identification, analysis, monitoring and continual improvement of relationships with and between stakeholders.
3. Ensures stakeholders' needs are understood and that priorities are balanced across competing demands.
4. Builds the trust that allows difficult conversations — about cost, risk or capacity — to happen productively.
5. Distinct from supplier management: this practice covers ALL stakeholders, not only vendors.

IN PRACTICE

A regular business-relationship review that surfaces an upcoming acquisition before IT is asked to absorb it.

EXAM TIP

Relationship management = all stakeholders. Supplier management = the supply side specifically.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Supplier Management

1. PURPOSE: to ensure the organisation's suppliers and their performance are managed appropriately to support the seamless provision of quality products and services.
2. Includes creating closer, more collaborative relationships with key suppliers to uncover and realise new value.
3. Activities: evaluating and selecting suppliers, negotiating contracts, managing performance, and managing renewal or termination.
4. Strategy considerations include strategic focus, resource scarcity, cost, subject-matter expertise and external constraints.
5. Underpinning contracts with suppliers must support the service levels promised to your own customers.

THE CHAIN

A 4-hour SLA to the business is undeliverable if the hardware vendor's underpinning contract is next-business-day.

EXAM TIP

Supplier commitments must be at least as strong as the SLAs they support — expect a question on this chain.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Supplier Management

The ITIL story: Axle's supplier management

Marco: *I've been assigned to the supplier management role at Axle. This means I'll be managing the monthly governance forums with our suppliers to track their service performance as outlined in their **service level agreement**s. I'll make sure the contractual obligations of our suppliers are in line with Axle Car Hire business outcomes.*

Radhika: *For example, we promise our customers that the cars will always be clean. We used to have our cars cleaned weekly, but to meet the new service promise, Craig's Cleaning will clean the cars each time they're returned to the lot.*

Henri: *Axle's services depend on multiple partners and suppliers. We work with car dealers and manufacturers, tyre manufacturers, cleaners, and roadside assistance providers. We also have Axle agents who promote our offerings, and partners in a loyalty programme who provide their services to our clients on special terms.*

Radhika: *We use many partners' and suppliers' services for our IT systems as well. This supports Axle's work on many levels, from internet access to software development.*

Marco: *Greater digitalization at Axle means more opportunity to build IT into our service offerings. The Axle app makes it possible to book and pay for car hire via personal devices. The Axle Aware system is installed in every car and is supported by IT and our partners. Fleet maintenance is planned based on the hire history of our vehicles, and controlled by our IT systems.*

Henri: *Because of this, Axle's business is now heavily dependent on IT and non-IT suppliers. Integrating and coordinating these services is part of supplier management. We expect our suppliers to provide a consistent level of quality for Axle and our customers.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Service Management Practices

1. Change Enablement
2. Incident Management
3. IT Asset Management
4. Monitoring and Event Management
5. Problem Management
6. Release Management
7. Service Configuration Management
8. Service Desk

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Change Enablement

1. PURPOSE: to maximise the number of successful IT changes by ensuring risks are properly assessed, authorising changes to proceed, and managing the change schedule.
2. A CHANGE is the addition, modification or removal of anything that could have a direct or indirect effect on services.
3. Every change is authorised by a CHANGE AUTHORITY — the person or group with the right to approve it.
4. The practice balances SPEED against RISK: too much control and delivery stalls; too little and outages follow.
5. It is 'change enablement', not 'change control' — the aim is to enable change safely, not to prevent it.

BALANCE

Pre-authorising low-risk standard changes frees the change authority to scrutinise the genuinely risky ones.

EXAM TIP

Note the wording: MAXIMISE the number of SUCCESSFUL changes — not minimise the number of changes.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Change Enablement

The ITIL story: Change control

Henri: *The car hire market is developing faster than ever. To make sure that Axle meets customer demands and capitalizes on opportunities, we need to have speed-to-market and to experiment with new ideas. Our new service offerings will see a lot of change at Axle. Some teams will need to double, while others may reduce. We need to bring everyone at Axle on board.*

Radhika: *The change control practice at Axle makes sure that our services achieve the right balance of flexibility and reliability.*

Marco: *Some of our processes are highly automated and designed for the fast deployment of changes. These are perfect for changes to our booking app and some of our IT systems.*

Su: *In other cases, such as when we update our vehicles, we use a mix of manual and automated testing. For example, the Axle Aware road monitoring and safety system requires consultation and approval before we can update it.*

Marco: *Systems such as Axle Aware can't be altered like the booking app. The priority for those changes is that we act safely and comply with appropriate regulations. That's more important than time to market.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

The Three Types of Change

1. STANDARD — pre-authorised, low-risk, well-understood and fully documented; implemented without needing new authorisation each time.
2. NORMAL — must be scheduled, assessed and authorised following a defined process; the change authority depends on the level of risk.
3. EMERGENCY — must be implemented as soon as possible, typically to resolve a major incident or apply a critical security patch.
4. Emergency changes are still authorised, but by a smaller, faster body and often with documentation completed afterwards.
5. Emergency changes may have a separate change authority and an accelerated assessment and approval path.

EACH TYPE

Standard: create a user account. Normal: upgrade a database. Emergency: patch an actively exploited vulnerability.

EXAM TIP

Standard = pre-authorised, NOT 'simple'. That distinction is a common exam trap.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Change Authority and the Change Schedule

1. The CHANGE AUTHORITY is the person or group who authorises a change.
2. Authority is assigned by risk and impact: low-risk changes are devolved to the team; high-risk ones escalate.
3. Centralising all authority in one committee creates a bottleneck and slows delivery — devolution is deliberate.
4. The CHANGE SCHEDULE is used to plan changes, assist communication, avoid conflicts and assign resources.
5. The schedule also supports post-incident review: it shows what changed and when.

DEVOLVED AUTHORITY

A standard account creation is authorised by the service desk; a core network upgrade goes to a senior authority.

EXAM TIP

The change schedule helps plan, communicate, avoid conflicts and assign resources — learn those four uses.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Incident Management

The purpose of incident management is to minimize the negative impact of incidents by restoring normal service operation as quickly as possible.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

What Is an Incident?

1. An INCIDENT is an unplanned interruption to a service, or a reduction in the quality of a service.
2. The purpose of incident management is to minimise the negative impact of incidents by restoring normal service operation as quickly as possible.
3. Every incident should be logged and managed to ensure it is resolved in a time that meets the expectations of the customer and user.
4. Incidents are prioritised by IMPACT (how much of the business is affected) and URGENCY (how quickly it must be fixed).
5. Restoring service takes priority over finding the underlying cause — that is problem management's job.

DEGRADATION COUNTS

A system that still works but has become very slow is an incident: quality of service is reduced.

EXAM TIP

'Unplanned interruption OR reduction in quality' — the reduction half is frequently the tested part.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

IT Asset Management

1. PURPOSE: to plan and manage the full lifecycle of all IT assets, to help the organisation maximise value, control costs, manage risks and support decision-making about purchase, reuse and retirement.
2. An IT ASSET is any financially valuable component that can contribute to the delivery of an IT product or service.
3. Covers the full lifecycle: acquisition, deployment, operation, maintenance, and disposal or retirement.
4. Supports licence compliance — knowing what is owned prevents both over-buying and under-licensing.
5. Distinct from configuration management: assets are about FINANCIAL value; CIs are about SERVICE relationships.

WHY IT SAVES MONEY

An accurate asset register reveals 300 licences paid for and unassigned after a restructure.

EXAM TIP

IT asset management = financial value and lifecycle. Service configuration management = relationships between components.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Monitoring and Event Management

1. PURPOSE: to systematically observe services and service components, and record and report selected changes of state identified as events.
2. An EVENT is any change of state that has significance for the management of a service or other configuration item.
3. Events are typically classified as INFORMATIONAL, WARNING or EXCEPTION.
4. Informational: no action needed. Warning: something is approaching a threshold. Exception: a breach requiring action.
5. This practice identifies and prioritises events, and establishes the right response — including raising an incident.

THE THREE TYPES

Informational: a backup completed. Warning: disk 85% full. Exception: disk full and the service has stopped.

EXAM TIP

Informational / warning / exception — know all three and that an exception may trigger an incident.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

What is an Event?

1. An event is any change of state that has significance for the management of a service or other configuration item (CI).

2. Event are classified into 3 types:

3. Informational

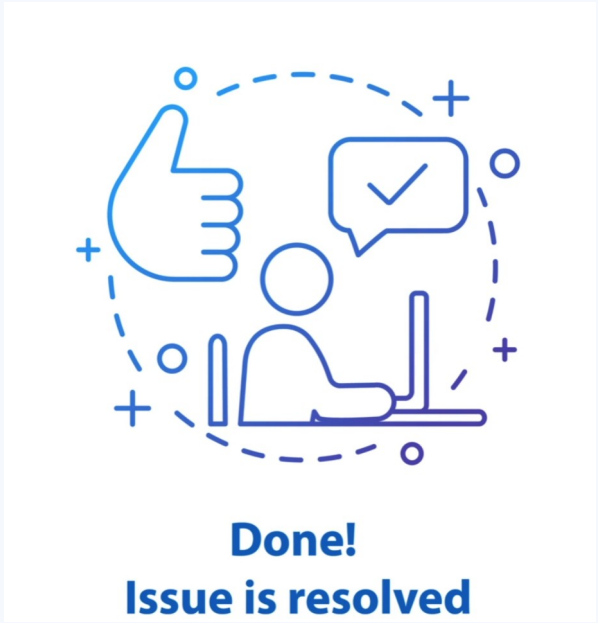

4. Warning

5. Exceptions

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Problem Management

The purpose of a problem management practice is to reduce the likelihood and impact of incidents by identifying actual and potential causes of incidents, and managing workarounds and known errors.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Problem Management

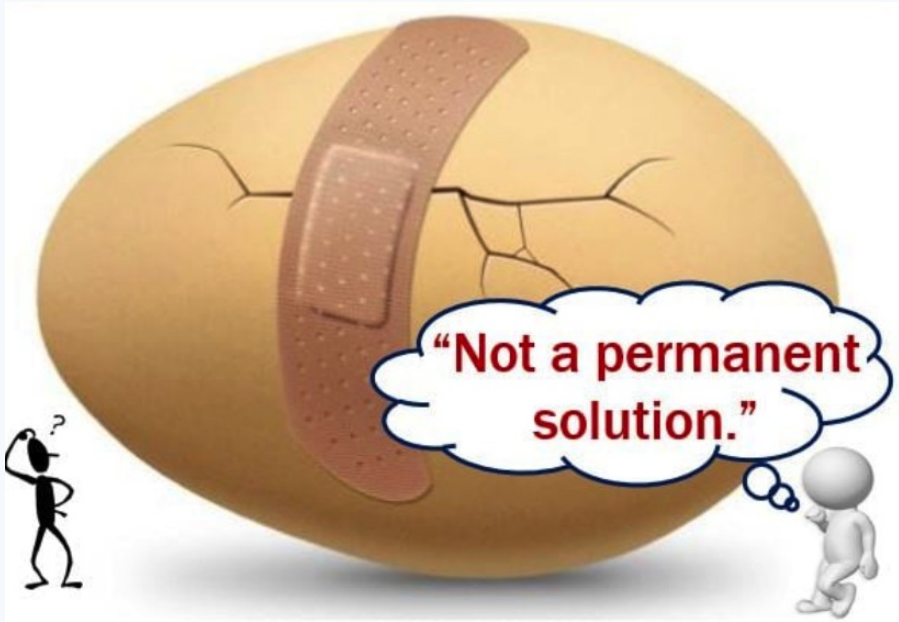

Figure 5.23 The phases of problem management

A problem is a potential cause of prior, current, or future incidents.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Workaround

A workaround is a solution that reduces or eliminates the impact of an incident or problem for which a full resolution is not yet available. Some workarounds reduce the likelihood of incidents

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

Problem Management

The ITIL story: Axle's problem management

Henri: *Axle participates in feedback programmes with all our car manufacturers. We share maintenance and repair data with them to help them to continually improve their services. In return, they alert us to any potential problems in our vehicles.*

Radhika: *Recently, we were alerted to a potential problem in our fleet. A car manufacturer had recalled a popular model in our fleet to fix an error found in the airbag activation system.*

Su: *Fortunately it was found before Axle experienced any incidents, but there was still the potential for issues to occur, which meant it was a problem we had to deal with.*

Marco: *We follow a similar practice for our other systems and services, including all of the IT components we use.*

Radhika: *Axle's incident management practice is one of our most important sources of information on errors in our systems. Any major incident we experience is followed by an investigation into the possible causes. Sometimes this will lead us to find and fix errors in the systems, and we often identify ways to decrease the number of incidents Axle will have in the future.*

Release Management

The ITIL story: Axle's release management

Marco: *When we release updates to our booking app, we make sure they're accompanied by user awareness and marketing campaigns for our users, customers, and teams. We provide specific training for the service desk and support teams that are internal and external.*

Radhika: *Some changes may need extra support or the introduction of new components. For example, Axle Aware was released with a new user manual to explain the system. We also made sure the Aware system could sync with the Axle booking app before we released it.*

Henri: *The support given to the new app and Axle Aware has really helped the release of both of these new offerings, leading to great first impressions and a strong level of adoption amongst our users and customers, as well as our own teams.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Service Configuration Management

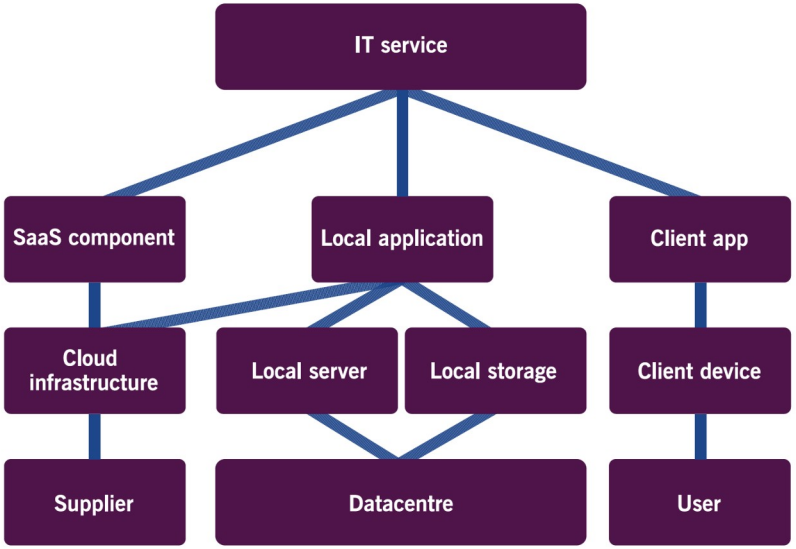

Figure 5.29 Simplified service model for a typical IT service

The purpose of a service configuration management practice is to ensure that accurate and reliable information about the configuration of services, and the CIs that support them, is available when and where it is needed. This includes information on how CIs are configured and the relationships between them.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Configuration Items and the CMDB

1. A CONFIGURATION ITEM (CI) is any component that needs to be managed in order to deliver an IT service.
2. CIs include hardware, software, networks, buildings, people, suppliers and documentation.
3. A CONFIGURATION MANAGEMENT DATABASE (CMDB) stores configuration records and the RELATIONSHIPS between CIs.
4. The value is in the relationships: they let you see what a change or failure will actually affect.
5. Collect only the CI data that is genuinely needed — an over-detailed CMDB becomes inaccurate and is then trusted by nobody.

WHY RELATIONSHIPS MATTER

Rebooting one server is safe or catastrophic depending on which services depend on it — the CMDB is what tells you.

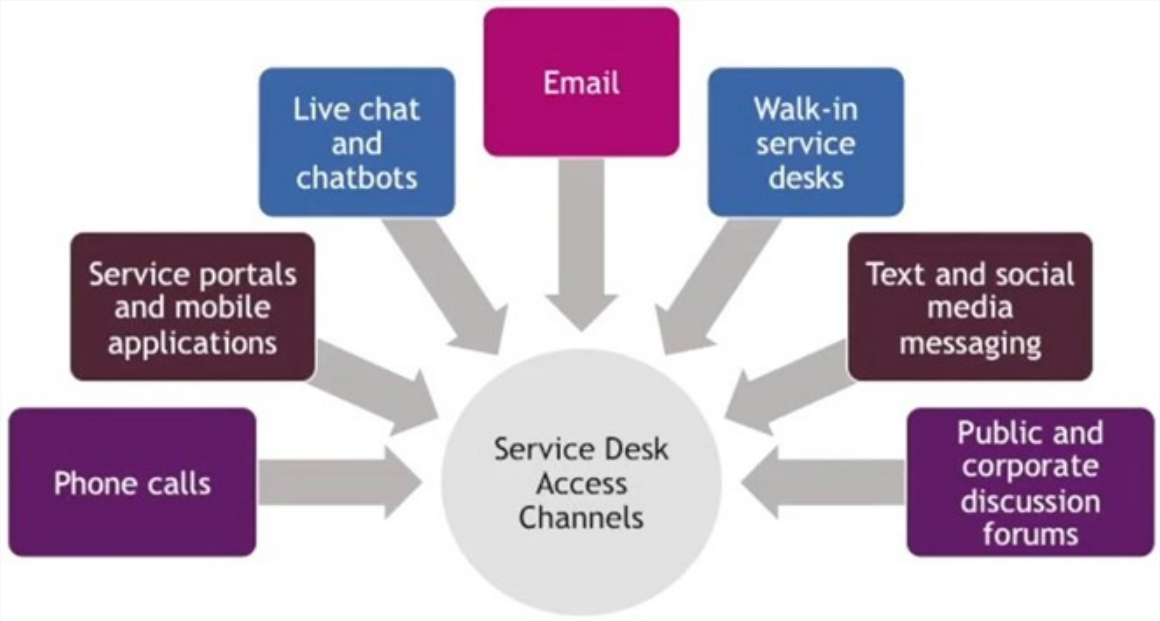

EXAM TIP

A CI is anything needing management to deliver a service — including people and documentation, not just kit.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Service Desk

The purpose of a service desk is to capture the demand for incident resolution and service requests. It should also be the entry point and single point of contact for the service provider with all of its users.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Value of Service Desk

1. Provide a clear path for users to report issues, queries, and requests, and have them acknowledged, classified, owned, and actioned.
2. Used to get various matters arranged, explained, and coordinated, rather than just to get broken technology fixed.
3. May not need to be highly technical but has to be practical understanding of the wider organization, the business processes, and the users.
4. Need to work close collaboration with support and development teams.
5. It has major influence on user experience and how the service provider is perceived by the users.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Service Level Management

The purpose of a service level management practice is to set clear business-based targets for service performance, so that the delivery of a service can be properly assessed, monitored, and managed against these targets

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Service Level Agreements

1. A SERVICE LEVEL AGREEMENT (SLA) is a documented agreement between a service provider and a customer that identifies both the services required and the expected level of service.
2. The purpose of service level management is to set clear business-based targets for service performance, so delivery can be properly assessed, monitored and managed.
3. SLAs must be written in business terms the customer recognises — not in technical metrics only IT understands.
4. Beware the 'watermelon SLA': green on every technical metric, red in the customer's actual experience.
5. SLAs require regular review: targets that no longer reflect business need are worse than no targets at all.

WATERMELON SLA

99.9% server uptime reported as success, while the login service was unusable every Monday morning.

EXAM TIP

'Clear BUSINESS-BASED targets' is the phrase — service level management is not a technical metrics exercise.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Service Level Mangement

The ITIL story: Axle's service level management

Su: *We regularly gather feedback from our customers to analyse their requirements and needs, and update our service offerings to match their expectations.*

Radhika: *We can't put every single customer expectation into our rental agreements, but we care about all of them and do our best to meet them.*

Su: *We also monitor the quality of the services provided by our partners and suppliers, such as the work done for us by Craig's Cleaning. When doing this, we need to be sure that the quality of every part of our services meets or exceeds the expectations of our users.*

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Service Request Management

The purpose of a service request management practice is to support the agreed-upon quality of a service by handling all pre-defined, user-initiated service requests in an effective and user-friendly manner.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Service Request

1. A service request is a request from a user or a user's authorized representative that initiates a service action that has been agreed upon as a normal part of service delivery.
2. Each Service Request may include one or more of the following:
3. A request for a service delivery action
4. A request for information
5. A request for the provision of resource or service
6. A request for access to a resource or service
7. Feedback, compliments, and complaint

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TOPIC 05

Deployment Management

1. PURPOSE: to move new or changed hardware, software, documentation, processes or any other component to live environments.
2. It may also be involved in deploying components to other environments, such as test or staging.
3. Deployment is DISTINCT from release: deployment moves a component; release makes it available to users.
4. Common approaches: phased deployment, continuous delivery, big-bang deployment, and pull deployment.
5. It is one of the three TECHNICAL MANAGEMENT practices in ITIL 4.

DEPLOY VS RELEASE

Code deployed behind a feature flag is live on the servers but not released — users see nothing until the flag flips.

EXAM TIP

Deployment = moving it. Release = making it available to users. The two are deliberately separated.

QUIZ 25

Knowledge Check

Which practice provides a single point of contact for users?

a. Incident management

b. Service request management

c. Service level management

d. Service Desk

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 26

Knowledge Check

What is the definition of change? environments

a. To make new and changed services and features available for use

b. To add, modify or remove anything that could have a direct or indirect effect on service

c. To move new or changed hardware, software, or any other component to live

d. To ensure

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 27

Knowledge Check

Identify the missing word in the following sentence. The purpose of the information security management practice is to ____ the organization's Information.

a audit

b provide

c backup

d protect

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 28

Knowledge Check

To track and manage improvement ideas from identification through to final action, organizations use a database or structured document called:

a. Change record

b. Service request record

c. Incident record

d. Continual improvement register

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 29

Knowledge Check

Which problem management phases have activities managed known errors?

a Error control

b Problem control

c Problem identification

d Problem resolved

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 30

Knowledge Check

Which practice set clear business-based targets for service performance, so that the delivery of a service can be properly assessed, monitored, and managed against these targets?

a Service Desk

b Relationship management

c Service request management

d Service level management

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 31

Knowledge Check

Service level management practices mainly apply to which service value chain activities? e. ‘Engage’ and ‘Design and Transition’

a ‘Plan’ and ‘Design and Transition’

b ‘Obtain or Build’ and ‘Deliver and Support’

c ‘Improve’ and ‘Engage’

d ‘Plan’ and ‘Engage’

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

QUIZ 32

Knowledge Check

Which of the following is NOT an incident?

a. A user make a complain to the Service Desk

b. Internet access provide the service provider is slow

c. Account clerk cannot print her invoice for billing

d. Account executive cannot access Sales application due intermittent unavailability

IN-CLASS ACTIVITY

Group Activity - ITIL

1. The class is to be divided into 2 or 3 or 4 small groups. Each group will comprise of minimum of 2 or 3 persons.

2. With reference to Service Value Chain, for each value chain activities “Deliver and Support ", “Engage” and “Design and Transition”, please list down their possible inputs and their corresponding outputs. Next, explain your answers. You can use the below sample tables to fill in your answers

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

IN-CLASS ACTIVITY

Group Activity - ITIL

1. With reference to Guiding Principles, please select one ITIL principle and explain how you can apply in your organization.

TOPIC 05

ITIL Certifications

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

LEARNING OUTCOMES

What You Achieved

Key Concepts of Service Management

Explained services, value co-creation, outcomes, costs, risks, utility and warranty.

ITIL Guiding Principles

Applied the seven guiding principles to a real workplace improvement initiative.

Four Dimensions of Service Management

Analysed a live service across all four dimensions and identified the weakest.

The Service Value System

Mapped inputs and outputs across the service value chain activities.

ITIL Practices

Triaged incidents, problems, changes and service requests to the correct practice.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

NEXT STEPS

Preparing for the ITIL 4 Foundation Exam

1

Review the key concepts and definitions in each topic of the Learner Guide.

2

Re-read the seven guiding principles and be able to apply each to a scenario.

3

Memorise the purpose statements of the ITIL practices covered in Topic 5.

4

Be able to distinguish incident, problem, known error, workaround, service request and change.

5

Attempt the practice exams and review every explanation.

© 2026 Tertiary Infotech Academy Pte Ltd · UEN 201200696W

TEST YOURSELF

Practice Exam

Sharpen your exam readiness with the Tertiary Infotech ITIL 4 Foundation practice exam. Attempt it under timed conditions and review every explanation.
